## Double Needle Walking Foot Machine

### Mauser Spezial MH2645-270242-33

The ergonomic equipment and the sewing parameters of the machine class MH2645-270242-33 meet the highest demands.

The foot lift of up to 20mm allows effortless insertion of even voluminous material. The narrow sewing head with integrated LED light allows a perfect view of the sewing material at any time.

The stroke height of the sewing feet is easily adjustable via a rotary dial. The standard quick stroke adjustment allows quick switching from standard stroke to high stroke and back by means of a knee lever. The sewing material can still be guided.

Needle threads up to Nm10/3 (Tex300) can be processed, which also allows decorative seams with thick threads and a stitch length of up to 9mm. With various sewing tools and a needle distance of up to 50mm, the MH2645-270242-33 class can be used for a wide range of applications.

With the optional asymmetric sewing equipment, the MH2645 can be operated either as a twin-needle machine or with only one needle. This means that it can also be used in smaller workshops.

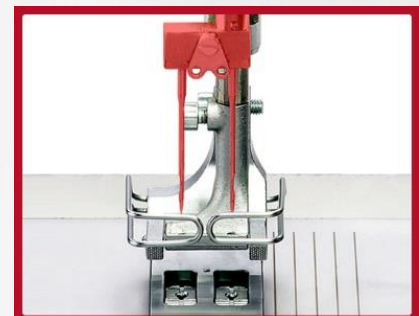

**To boost productivity, the machine is equipped with XXL sewing hooks using bobbins with 32mm diameter for less downtime for bobbin changes.**

With the integrated 750W direct drive you can handle all kinds of sewing operations, while the integrated control panel allows easy access to the main sewing parameters.

The dial allows you to set your sewing foot stroke for your common sewing operation and benefit from maximum sewing speed

The asymmetric needle gauge is the perfect choice for smaller shops using only one machine for double and single needle operations. (Optional)
