

Top Benefits

Best ROI in the Industry

Lower cost, higher value, free unlimited partner accounts

Secure Access

Web, sync, drive, mobile apps, cloud enabled file servers

Security and Data Protection

Two factor authentication, SSL/TLS, ransomware protection, endpoint and server backup

Custom Branding

Use your own domain, design, logos, email and terms of service

Powerful Administrator Tools

Analytics, reports, workflows, auditing, EMM

File Sharing and Collaboration

Public and private shares, team folders, low level granular permissions

Microsoft Office Integration

Office Online, Outlook, Email add-ons

Multi-tier Support Packages

Base Support, Premium & Extended Live Support, Professional Services

#1 Enterprise File Share, Sync, Backup and Mobile Access for Business

Secure Remote Access

Always have secure remote access to your files. FileCloud offers many options and will integrate seamlessly with your existing file systems. We protect your files and make them available to you across all of your devices.

Smart Drive

Our FileCloud Drive app mounts your cloud space as a local disk. It provides access to terabytes of files without consuming local storage. Virtual drive helps limit offline copies of files and comply with regulations.

Share Securely

Create public, private or password protected links. Securely receive files and set up group spaces for team file sharing. Mark your files view only, restrict the number of downloads, make them available for a limited time, FileCloud lets you share how you want.

Team Collaboration Tools

Team folders make group collaboration simple. All your files and folders can be organized and accessed from a single place. Team leaders can customize team folders and subfolders with many levels of permissions.

Cloud Enable Your File Server

When your file server is the central location for all of your data, accessing remote enterprise files through FTP and a VPN is cumbersome. FileCloud brings more efficiency to your file server, making it easier to access, share and track your data from anywhere.

Unparalleled Branding Options

You put a lot of resources into creating your brand, now put it front and center. Customize your background design, logos, fonts, email templates, terms of service and more. Run FileCloud from your own domain and you control almost everything.

Integrate with Microsoft Office and Microsoft Outlook

Store your Microsoft Office files in FileCloud and you can open, edit and save right from the app or using a browser. Automatically upload email attachments and share secure links with the FileCloud Outlook add-on.

Unparalleled Branding Options

You put a lot of resources into creating your brand, now put it front and center. Customize your background design, logos, fonts, email templates, terms of service and more. Run FileCloud from your own domain and you control almost everything.

Total Security

FileCloud uses modern state-of-the-industry encryption and secure transfer protocols to keep your files safe. Configure your security policies easily for many levels of protection, including multi-factor authentication, SAML Single Sign-On, customer held encryption keys, virus scanning, ransomware detection and mobile device monitoring.

Powerful Administrator Tools

FileCloud helps you deploy and manage thousands of users and millions of files. Your administrator dashboard gives you powerful tools to track your files, including usage trends, geographical data and other key analytics. Apply global policies, customize user experience, automate document workflows, view reports and perform granular auditing all with FileCloud.

Ransomware Protection

Cybercriminals try to exploit your trust and find vulnerabilities in your network. FileCloud comes with an industry-first heuristic engine to detect ransomware early. We limit your exposure to malicious attacks and our customization features provide strong protections against malware, email spoofing and other threats.

Scalable

With high-availability, automated server backup and rollback features, FileCloud can be scaled to large deployments.

App and Client Management

Monitor your modern BYOD workforce in real time. Your administrators can selectively remove or block data access to suspicious devices. In the case of a lost or stolen mobile phone, admins are able to protect confidential files by remotely wiping FileCloud data from that device.

Full Backup and Data Loss Prevention

Know your files will be safe in the event of an accident or disaster. FileCloud offers full secure endpoint server backup and Self-service restoration. Recover files from the recycle bin or revert to a previous state with unlimited file versioning.

Branch Office Synchronization

With our ServerLink technology, each of your offices can run a separate FileCloud instance which synchronizes its data with other branches and your headquarters. This provides high performance, maximized uptime, and can link organizations across the world.

Superior Return-on-Investment

Advanced functionalities like compliance support, hyper-security, and workflow automation distinguish FileCloud's solutions from competitors'. Unlimited, free client/guest accounts extend your brand while ensuring secure file sharing and collaboration.

Keep In Compliance

A business that handles sensitive customer data must take special care to stay in compliance with regulations. With FileCloud, you get access to some of the best reporting and auditing features available. Administrator tools let you enforce global policies, track user activities, and make certain you comply with HIPAA, FINRA and EU GDPR.

FileCloud features

Remote Access	Enterprise Server Run FileCloud on your own server	Enterprise Online We host FileCloud for you
Desktop Sync – Cross Platform (Windows, Mac, Linux)	✓	✓
