

Update: Florida and Arizona—Horrible Toxic Exposure

Pesticides, PermaSease 4-4, Termidor, and Fipronil

I was exposed without warning in Florida over and over again, leaving me in debilitating pain. I discarded my belongings and chose to move out of state in order to find safety from pesticide exposure. I suffered permanent thyroid and nerve damage that I was recovering from.

I moved to Arizona, and again, without warning, my new home, investment, and health were exposed. Within moments, I began feeling the same symptoms as I did in Florida. Since they sprayed on the 3rd, I have been in excruciating reproductive pain. The chemicals behave similarly. Fipronil, however, attacks the reproductive system.

I was not only denied my right to autonomy and health in Florida, but the landlord also refused to communicate and never returned my security deposit. I contacted a lawyer and requested over \$9,000 in damages. They returned my deposit.

Today, I contacted a personal injury lawyer in Arizona, notified the landlord that I am terminating my lease, and filed an insurance claim. Thankfully, one of my claims has already been approved. Once again, my home and health have been placed in jeopardy. I am looking forward to leaving and will do so as soon as possible.

We cannot even breathe without being exposed to deadly toxins. A woman cannot be in her own apartment without experiencing trespassing and boundary violations. Our belongings are no longer safe from landlords. What gives? Enough already.

The era of abuse, corporate negligence, landlord negligence, medical negligence, bodily harm, and gaslighting needs to end. We are living in cancerous and deadly environments. They want us to pretend we are okay. We are not okay. We are experiencing mass ghettoing, diaspora, chemical warfare, and economic warfare.
