Reaction in Oklahoma

I researched pesticide use in Oklahoma and realized that pesticides are being used here, although I am unsure whether the hotel where I am staying was sprayed or whether I am still being exposed through my belongings. I believe this could be causing a severe reaction.

I am experiencing symptoms that are worse tonight than they were last night, which prompted me to research whether pesticides have been used here in Oklahoma. The feeling is burning and stinging on the skin, along with tremors and other symptoms.

I am ready to get home and wash my belongings. I left my brand new bed and couch behind in Arizona and discarded many of my belongings. I currently have a claim insurance open.

The company is BASF. The chemicals being sprayed today are 6,000% more toxic to animals than DDT. I do not trust the chemicals, nor do I feel that contractors should be spraying Americans. I had never experienced any reaction from chemicals until recently, **post 2019**, and have always traveled.
