

Do Not Spray!

Do not allow anyone to spray Termidor, fipronil, PermaSease 4-4, or permethrin anywhere near vulnerable individuals, pregnant women, babies, dogs, cats, the elderly, or people with disabilities.

Pesticide exposure poses deadly and cancerous health risks, and certain individuals and animals may be particularly vulnerable. If you are pregnant or have vulnerable people or animals in your home, learn what product is being used, read its safety information, and ask about precautions and alternatives before treatment.

Be proactive! Do not allow them to spray! Post a NO SPRAY sign on your door! Put your request in writing, and have your landlord or pest-control provider sign a NO SPRAY agreement! Protect yourself, your family, your pets, and your home. Know what is being used around your property before any pesticide application takes place.
