

## Political Slavery, or Capture, Systems of Control Continuums

D. Cowdrey

### Modern Slavery, War & Capture

Pandemic was “lockdown,” = Containment.

In Spear’s case Containment was “conservatorship.”

- They may manufacture a false identity using AI or doppelgängers.
- Russian-Israel organized crime or other foreign crime groups leak into political domains.
- Person is tailored in such a way, slavery becomes justified.
- Real cold world, real cold war.

Political capture often begins with entitlement rather than force. When individuals or institutions assume the authority to define another person’s identity, maturity, loyalties, or moral standing, they cross from persuasion into possession. This entitlement frequently presents itself as truth telling or concern, yet it functions as external narration of another person’s inner life. Dignity and autonomy are diminished when authority is claimed over experiences that belong solely to the individual.

From entitlement follows narrative twisting. Personal experiences are reframed to serve political or social agendas, removed from context and reassigned meaning. In this process, truth becomes overwritten rather than examined. The individual’s voice loses standing as imposed narratives take precedence. Political extortion emerges when compliance is extracted through social pressure, reputational threat, and the withdrawal of belonging. Livelihood, safety, and participation become conditional upon acceptance of imposed interpretations.

When these dynamics persist, they solidify into political slavery in a modern form. Agency becomes constrained within approved categories of thought and behavior. Disagreement is reinterpreted as deficiency or threat. Boundaries are treated as obstruction, and autonomy is recast as defiance. The individual exists within narrowing limits defined by external authority.

To sustain this control, political hate mapping develops. People are sorted into moral classifications that determine how they may be treated. Once mapped, a person is engaged as a symbol rather than as a full human being. This abstraction lowers resistance to harm. Social isolation, professional interference, harassment, and escalation become easier to justify once narrative dehumanization has occurred.

The danger of this progression lies in its gradual normalization. Each stage can be framed as responsibility, protection, or moral duty. Over time, truth erodes, boundaries collapse, and personal sovereignty is taken. A healthy society resists political capture by honoring limits of authority. Conscience, lived experience, and human dignity remain beyond ownership. Where autonomy is respected, coercive systems lose their power to advance.
