

“Kindling Fires” Jewish Politics, ACLU – Concern for Everyone But Americans *in America*?

Still, children go missing, with tens of thousands missing every six months. Will people like Judith Levine be willing to load up their guns and **don** full combat gear to rescue them? More than likely not. That’s their job, right? The one being cowardly attacked by those promoting “physics.”

U.S. territory is overtaken by illegal aliens. Race conflicts are ignited. Our people are dying. These “movements of physics” work for those seeking to participate in terrorism, anarchy, and a cold war. We cannot say it aligns with U.S. goals of safety, security, and peace. Not quite.

We remember American communities; harming our military was never the path for Americans. Support our troops—that’s our motto. For foreign enemies and extreme anarchists with a thing against authority, especially American authority? Sure.

Across the board, there is little accountability for movement leaders, yet they continue to target our officers, our military, our border patrol, and our agents who are putting their lives on the line day after day to safeguard the American people. They are rescuing the children who have been stolen by the same illegal aliens the left wing is fighting for. Does that make sense?

America—devalued, dehumanized, and preyed upon—vulnerable and manipulated. Quite frankly, the soul and life are being siphoned out of us, given a new brand: “pluralism vs. populism.” For simplicity’s sake, a smart political movement, a smart smuggling and human trafficking movement.

Instead of giving these movements polite words that beat around the bush, or, cross our borders through our oceans, lakes, streams, and forests and sadly, with the cruel, vile and deceitful intention to harm Americans, let’s just call it what it is: instrumental mass migration, and wartime attrition, ***a modern war front***.

The anti-ICE resistance is working

Judith Levine

A mass movement defending immigrants has slowed the Trump administration's abuses

Resistance, in physics, is the force that hinders the flow of charged electrons as they zigzag from point to point. Resistance doesn't stop the flow of electricity. Instead, it causes heat.

Popular resistance works the same way. It obstructs and slows the government's business, creating political heat and slowing it further.
