

****Americans Beware****

****Zyklon B Was Called "Gift Gas"*****

It was the substance used to kill millions of people during the Holocaust in World War II.

It was later acquired by the Allied forces (Russia, UK, France, US).

Today, Americans are being sprayed indoors and outdoors by the same repurposed company. In one town alone, more than 42,000 pounds of nerve-killing spray was reportedly released into the air and carried by the wind, both indoors and outdoors. They call it "luxury spray."

Terminix and Permethrin 4-4 are both designed to kill the nervous system. The experience is cancerous and deadly. It affects insects, animals, and humans. One man was left disabled and received an \$87 million settlement. Hundreds of thousands of lawsuits later, the spraying continues.

Of course, they are doing all they can to silence American voices with new laws that suppress free speech and limit the ability to pursue lawsuits. Thankfully, efforts to mitigate this risk succeeded through the work of politicians who thwarted their bills.

The experience mirrors World War II as the toxic air comes through walls, vents, and the outdoor air. It can cause heart discomfort, bodily pain, and permanent nerve damage that may make it difficult to be near radio frequencies, including computer devices. This could result in permanent disabilities for people whose work depends on computers.

It is also a socioeconomic hazard. Once this toxic spray permeates your belongings, it does not leave. The only way to mitigate the contamination is to throw those belongings away. It can cause devastation comparable to, or even worse than, a household fire. The only difference is that there is no odor and no visible fire. It simply burns.

Modern human cost.
