THE SNAKE PIT - Human Sexuality

Union of Saints

Human Sexuality · Natural Instinct · Energetic Boundaries · Preservation of Spirit

1. The Natural and Positive Side of Human Sexuality

Human sexuality is a normal, natural, and necessary part of human existence. It contributes to human survival, reproduction, physical health, emotional connection, intimacy, and the continuation of life. Sexual energy, when expressed in healthy and respectful ways, can be uplifting, life affirming, and beneficial to both individuals and relationships.

There is nothing inherently wrong with attraction, desire, courtship, or the natural instincts that bring men and women together. These are normal elements of human nature. A certain amount of sexual energy within social environments is functional, healthy, and part of the natural human experience.

2. When Natural Instinct Becomes Distorted

The problem develops when natural attraction becomes a social ritual of control, objectification, humiliation, or exploitation. What may begin as ordinary attraction can evolve into a strange social and energetic exchange in which individuals become subjects of observation, competition, gossip, sexual ranking, and territorial behavior.

In some environments, men may effectively pass women between social circles, sharing intimate details, personal experiences, or private information with others. Women may also participate in the cycle through competition, judgment, or slut shaming. These behaviors can create an environment in which intimacy is no longer protected and individuals become objects within a larger social dynamic.

The resulting behavior can resemble a mating ritual, but one that has become detached from healthy courtship, mutual affection, consent, and personal responsibility.

3. The OSIRAM Comparison: Natural Energy and Its Distortion

The OSIRAM comparison represents the duality between natural life energy and its potential distortion.

An instinct that is naturally associated with life, creation, attraction, and human connection can fall into a destructive realm when it becomes excessive, manipulative, or disconnected from respect for another person's individuality.

This is where the distinction between natural sexuality and sexual exploitation becomes important. The presence of sexual energy does not make an environment unhealthy. Rather, it is the misuse, manipulation, and excessive consumption of that energy that creates harm.

The process can also take elements of the human spirit with it. When individuals are repeatedly sexualized, judged, exposed, or treated as objects, their sense of dignity, emotional security, personal ownership, and spiritual well-being can become compromised.

4. The Snake Pit: When the Energy Becomes Predatory

The Snake Pit symbolizes an environment where natural attraction becomes entangled with unhealthy social behavior.

It can include:

- Sexualized social ranking and territorial behavior.
- Passing women between social circles through gossip or intimate disclosures.
- Sharing private information without permission.
- Slut shaming, humiliation, and sexual competition.
- Degrading individuals in order to sexualize them.
- Using attraction, attention, or rejection as instruments of social control.
- Creating environments where people feel watched, evaluated, or victimized rather than respected.

The contradiction is that sexuality, which can be a source of connection and positive health, becomes an instrument of degradation.

Instead of uplifting human relationships, the environment encircles individuals in a cycle of sexual attention, judgment, and social pressure.

5. Balance, Boundaries, and the Preservation of Human Light

The ultimate goal is good health.

Human sexuality should not be suppressed as though it were inherently harmful. Nor should natural attraction be allowed to become an excessive social force that consumes personal boundaries, dignity, and emotional well-being.

A little of this energy can be natural, functional, and healthy. However, going overboard and continually drawing from the well of human light can create an unhealthy imbalance.

The objective is to preserve the positive aspects of human sexuality without allowing them to become predatory, degrading, or spiritually consuming.

Healthy adult wavelengths should encourage mutual respect, consent, privacy, affection, personal responsibility, and the freedom to establish boundaries.

Foundational Principle:

Human sexuality is a natural expression of life. It should uplift rather than degrade, connect rather than victimize, preserve rather than consume, and contribute to the health of the individual rather than diminish the ownership of self and soul.

The goal is not to eliminate the natural human instinct, but to maintain its balance, protect its boundaries, and preserve the light within it.
