

## **The Challenge of Bias and Truth**

The challenge with democratic and white bias is that our own people will often attack us for speaking truth to power. Unable to grasp the full truth, they reach for pieces of information, turning their focus toward attacking the messenger instead. The truth challenges everything they believe and understand. What was once considered normal is now a false reality, as reality itself has been manipulated.

Truth is complex. It requires real concentration and a composed mind that can remain focused on difficult subjects such as human slavery and war. These are among the most difficult topics a human being can confront. Yet in doing so, the truth sets us free.

If we do not understand how to navigate slavery and war, we cannot truly understand peace and freedom in depth. Peace is natural, and there is an innate human need for it. Some choose to remain disconnected from societal complexities, and while that may feel like freedom, it often leads to an inability to process these realities. Unfortunately, this can result in the abuse and attack of those who do engage with these difficult truths. This is an inexperienced response, and at this point in history, it represents a failure.

Our citizens face risks tied to large scale war, systemic control, and ongoing global tensions. Awareness, therefore, is a civic duty. Where there are signs of betrayal or instability, it becomes essential that we value our country and our people enough to seek understanding. Through that understanding, we can protect one another and ourselves.

Securing our nation from foreign and domestic threats must remain a priority. There are leaders working to do this, though the burden is heavy, especially when deeply held beliefs are challenged. Still, the truth remains that America has experienced war entrenched in modern forms of slavery, and the path forward requires a commitment to protecting our people.

The choice is clear. We must process unsettling and overwhelming information. Through US we have worked through difficult realities and sought to reach the source of these issues.

The Union of Saints refers to this conflict as the Blamesovjf+ war. It may also be understood as a BRICS related conflict, a war involving Russia and its allies, or as a broader conflict involving Americans and newly arriving populations. It can be seen as multiple major powers competing for strategic control.

As we move forward, we place safety at the center of our union. We reject any underground movements tied to foreign adversaries and their outliers, and we remain committed to protecting our people and preserving the integrity of our nation.

**Sincerely,**  
Cowdrey
