

What do I do when the Leo Marbelite application is complete?

What To Do

1. Never use soft water to fill your pool.
2. It is highly recommended that the pool be completely filled with water 24-30 hours or sooner after marbelite application is complete to avoid the finish from drying out. Shrinkage cracks or webbing may occur and will be visibly more apparent or mottled coloured applications if the pool is not filled quickly enough.
3. When filling with a garden hose it must be placed at the bottom of the pool near the drain with a rag tied around the end to disperse the water (never walk into the pool). The hose must be gently placed in the bottom near the drain from the top of the pools edge.
4. Having water delivered by trucks is a very wise option to speed up the filling process. Leo Marbelite Inc. will organize this service for the homeowner with their permission. This is an extra cost and is not included in the cost of the marbelite. (Budget \$800.00-\$1,000.00 depending on pool size).

Superior Service And Quality For Your Dream Pool
