Our mirror manufacturing partners already supply **luxury hotels and major hospitality brands worldwide**—and during our December 2025 visit to their facilities in China, we saw exactly how they achieve that level of quality. Meeting the production teams in person and inspecting their processes reinforced our confidence in what we can deliver to our clients.

The illumination options cover every application. **Backlit** mirrors feature rear-mounted LEDs that create a soft ambient halo effect, while **front-lit** configurations provide perimeter or surface-mounted task lighting. **Edge-lit** designs transmit light through the mirror edge for a sleek, minimal appearance, and combination systems blend multiple approaches. Light distribution is engineered to eliminate visible hot spots and ensure even coverage across the mirror surface.

Technical specifications are **fully customizable**. CCT ranges from 2700K warm through 4000K neutral to 6500K daylight, with tunable white options that let users adjust the ambiance. CRI ratings of 90 and above ensure accurate color rendering for grooming applications. Anti-fog systems use resistive heating pads laminated to the mirror backing, clearing the viewing area within two to three minutes when activated by switch, sensor, or synchronized with the lighting controls.

Smart features include capacitive touch sensors, motion-activated operation, proximity dimming, integrated digital clocks and temperature displays, Bluetooth audio with concealed speakers. Dimming is smooth from 0 to 100 percent with no flicker, and memory functions retain preferred settings. All electrical components use **UL-listed LED drivers** with Class 2 output and IP44 or IP65 ratings for bathroom wet-zone compliance.

Sizes range from compact 18×24-inch vanity mirrors through 72×36-inch full-width installations, with large-format architectural mirrors exceeding 120 inches available for commercial lobbies and retail environments. Custom shapes including round, oval, arched, and irregular forms are readily accommodated, with frameless, minimal-frame, and decorative frame options.

What distinguishes Force Global Supply is how quickly we can move. Because we know these factory teams personally, sample production happens rapidly. Describe your requirements—dimensions, lighting configuration, features, finish—and our partners produce working samples that let designers and specifiers evaluate real products before committing to volume orders.
