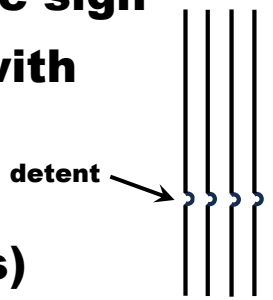
Fall Show Street Signs

Installation & Removal Instructions

Tools & Materials

- 2 ft x 4 ft corrugated plastic sign
- 4 metal stakes (wickets), with "detent" at the third point
- Regular hammer
- Heavy pliers (eg. Lineman's)
- Heavy gloves
- Sharpie marker (black)

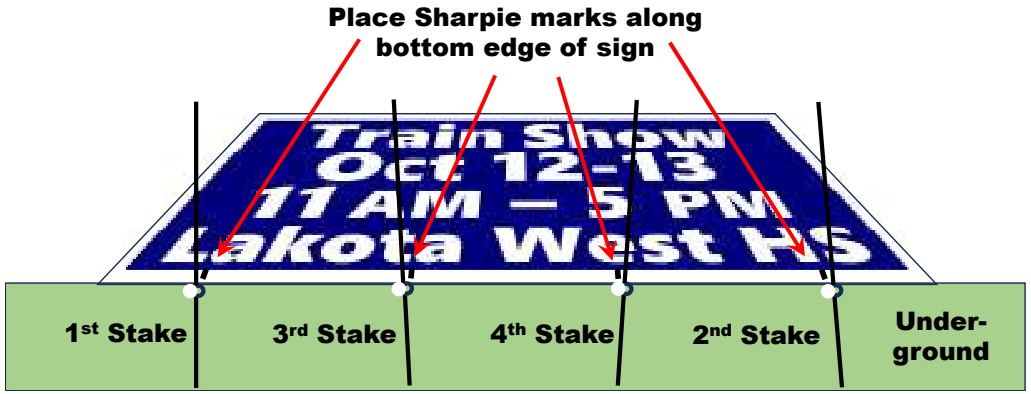


Installation Step 1

- Lay the sign on the ground to use as a straight edge to guide your line of stakes
- Place the short end of a stake about 4 to 6 inches from one end, and hammer it into the ground so the detent is at ground level
- Do same for next stake at the other end
- Eye-ball the spacing of the two interior stakes and then hammer them in

Installation Step 2

- Before picking up the sign, use a sharpie to mark on the bottom edge of the sign where each stake hits the ground
- This is very important since the top of the stakes are usually at different spacings



Installation Step 3

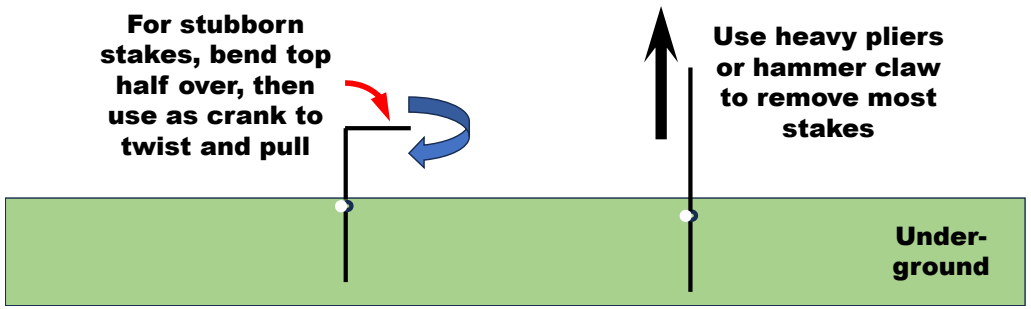
- Pick up the sign, and slide it onto an end stake at that stake's sharpie mark
- Successively slide the sign onto each of the other stakes, one at a time, while keeping the sign at an angle

Installation Step 4

- Once all 4 stakes are in their correct flutes, gently slide the sign down to within 1 inch of the ground (to hold up to wind)
- This should be easy, if the stakes are in the correct flutes
- If any detent is protruding from the ground, the sign can not be fully lowered

Removal Step 1

- Pull the sign upwards, to either pull it off the stakes or bring some stakes with it

Removal Step 2


- Pull remaining stakes out of ground using heavy pliers, or claw of hammer, starting with a twist motion
- For stubborn stakes, just bend top half of stake about 90°, then twist stake using that bend as a crank lever, and pull out
- Pull out any stakes from the signs
