

## Featured Lunch and Learn

# IMPROVING CONCRETE PERFORMANCE Benefits of Ultra-Low Permeability Concrete

Course # - VLMGK1011260

Provider: Specialty Products Group/ATC Sales& Consulting

Length: 60 Minutes

Description: This presentation addresses eliminating issues due to moisture within the concrete flooring slab and roof deck using a Water Vapor Reducing Admixture, Vapor Lock. The presentation also examines a technical solution that you can provide as an enhancement to your clients' projects from performance, schedule-reduction, moisture risk-mitigation, green-building initiative, integral water proofing and budget-minimizing aspects. As well as alternate methods to improve impermeability and consequently sustainability of all concrete and concrete repair applications.

Learning Objectives: After completion of this presentation, participants will be able to understand the many issues associated with concrete and the following key points:

- VOC Rules & Identifying Impact
- Pro-Active Solutions to Moisture Proofing concrete
- Design Reactive Solutions for Existing Buildings & Roads
- Identify & Eliminate Potential Future Issues
