Blotter layer required for pourous surface adhesives	✗	✓	✓	✓	✓	*7
Exterior Warranty with repair product	✓	✗	✗	✗	✗	
Corrosion Control	✓	✗	✗	✗	✗	

Note 1: SPG performs its own moisture testing at no cost.

Note 2: SPG (Vapor Lock Manufacturer) standardly offers a 10 year labor & material warranty in the event of moisture or adhesive bond loss. B-1, Concure, Iselogik offer a lifetime Warranty against moisture issues but only match the adhesive manufacturers Warranty for bond which is frequently 1 year. SPG would be happy to discuss the differences in the Warranties.

Note 3: When SPG issues a Warranty Lloyd's of London issues a 3rd party insurance policy in the amount of \$20,000,000.00 (CAD) underwriting the SPG Warranty.

This policy is Project Specific and can include all stakeholders owner, architects, engineers, ready mix, etc.

Note 4: Tracers are put into the admixture as a Quality Assurance step to ensure placement in concrete by chemical analysis.

Note 5: While Barrier One does offer a sodium silicate technology admixture most of their marketing efforts are centered on pushing an industry unproven technology of potassium silicate, this is the CMS product.

Note 6: SPG has a certification program for ready mix providers and finishers. This makes the project participants well prepared.

Note 7: SPG does not require the use of a blotter layer of cementitious patch when using adhesives designed for porous concrete.
