#### Client Details

**Name** Petras, Jessica  
**Address** P.O. 782  
Prince George, Virginia,  
23875

#### Patient Details

<b>Name</b>	GG Legacy Onyx Blaze Of Liberty Katz	<b>Age</b>	11 months
<b>Species</b>	Feline	<b>Sex</b>	Male
<b>Breed</b>	Maine Coon	<b>Referral</b>	No Primary Veterinarian - No Primary Veterinarian

#### Client Summary

## Cardiac Evaluation Report

Exam Date: 05-21-2022

### Diagnosis

- Normal cardiac structure and function
- No signs of cardiomyopathy

### Please Note

*Nutrition and Activity:* Normal.

*At Home Monitoring:* There is currently a very low risk for clinical signs of heart disease. However, as cardiomyopathy can develop at any age, please monitor for signs of respiratory difficulty, exercise intolerance, anorexia, weakness, lethargy, etc. If you note any of these symptoms, please have GG Legacy Loki Of Liberty Katz evaluated by your veterinarian.

*Breeding Recommendations:* No specific precautions noted for continuation in a breeding program.

### Reevaluation

- Continue routine care as recommended by your primary care veterinarian.
- Recommend a recheck echocardiogram if an abnormal cardiac exam is noted, clinical signs of cardiac disease develop, an abnormal NTproBNP (cardiac stress hormone blood test) is noted, or at least every 2 years for at-risk breeds, especially those that have been used in or are actively being used in a breeding program.

### Visit Summary

**History:** Presented for evaluation in HCM clinic/pre-breeding screening. Apparently healthy.

**Focused Physical Exam Findings:** HR 200, soft grade I-II/VI left parasternal systolic murmur; arrhythmia, click, or gallop; strong/synchronous/symmetrical femoral pulses; MM pink/moist, CRT <2 sec; eupneic, normal BV sounds throughout all fields.

GG Legacy Onyx Blaze Of Liberty Katz

05-21-2022

Pg: 1 / 2

### Screening Echocardiographic Findings

Normal left atrium; normal mitral valve with no regurgitation; normal left ventricular end diastolic and systolic dimensions; normal septal and left ventricular wall thickness; normal indices of systolic function; normal aortic valve and ascending aorta; normal left ventricular outflow tract on CFD; normal right atrium; normal tricuspid valve with trace regurgitation; normal right ventricle; normal pulmonic valve and pulmonary artery; normal right ventricular outflow tract velocity and profile.

### Comments

Fortunately, there are no signs of cardiomyopathy today and thus no concern for use in a breeding program. There is a soft murmur today which fortunately appears to be an innocent/benign murmur as there are no signs of cardiac disease. We recommend twice yearly physical examinations for all cats of breeds that are at risk for cardiomyopathy. Signs of cardiomyopathy can develop at any age. Thank you for visiting us at this clinic setting today.

Sincerely,  
Matt Boothe, DVM, DACVIM (Cardiology)

#### Client Summary

## Cardiac Evaluation Report

Exam Date: 05-21-2022

#### Diagnosis

- Normal cardiac structure and function
- Mild dynamic left ventricular outflow tract obstruction (narrowing in region of blood leaving heart)
  - Normal variant for cats
  - Source of an innocent/benign heart murmur
- No signs of cardiomyopathy

#### Please Note

*Nutrition and Activity:* Normal.

*At Home Monitoring:* There is currently a very low risk for clinical signs of heart disease. However, as cardiomyopathy can develop at any age, please monitor for signs of respiratory difficulty, exercise intolerance, anorexia, weakness, lethargy, etc. If you note any of these symptoms, please have Carolinameows Sylvie Of Liberty Katz evaluated by your veterinarian.

*Breeding Recommendations:* No specific precautions noted for continuation in a breeding program.

#### Reevaluation

- Continue routine care as recommended by your primary care veterinarian.
- Recommend a recheck echocardiogram if an abnormal cardiac exam is noted, clinical signs of cardiac disease develop, an abnormal NTproBNP (cardiac stress hormone blood test) is noted, or at least every 2 years for at-risk breeds, especially those that have been used in or are actively being used in a breeding program.

#### Visit Summary

**History:** Presented for evaluation in HCM clinic/pre-breeding screening. Apparently healthy.

**Focused Physical Exam Findings:** HR 180, grade III/VI left parasternal systolic murmur; no arrhythmia, click, or gallop; strong/synchronous/symmetrical femoral pulses; MM pink/moist, CRT <2 sec; eupneic, normal BV sounds throughout all

fields.

#### Screening Echocardiographic Findings

Normal left atrium; normal mitral valve with no regurgitation; normal left ventricular end diastolic and systolic dimensions; normal septal and left ventricular wall thickness; normal indices of systolic function; normal aortic valve and ascending aorta; mild aliasing in LV outflow tract with mild dynamic left ventricular outflow tract obstruction; normal right atrium; normal tricuspid valve with no/trace regurgitation; normal right ventricle; normal pulmonic valve and pulmonary artery; normal right ventricular outflow tract velocity and profile.

#### Comments

Fortunately, there are no signs of cardiomyopathy today and thus no concern for use in a breeding program. There is a soft murmur which is corresponding to a mild dynamic left ventricular outflow tract obstruction - this can be normal for cats and is the source of an innocent or benign heart murmur today. We recommend twice yearly physical examinations for all cats of breeds that are at risk for cardiomyopathy. Signs of cardiomyopathy can develop at any age. Thank you for visiting us at this clinic setting today.

Sincerely,  
Matt Boothe, DVM, DACVIM (Cardiology)
