

AgrowPulp™ – Impact on Tomato Plants

Identical plants were placed in the soil in separate greenhouses with the same sun exposure and watered in like manner.

AgrowPulp/Tea was applied at a rate of approximately 10 pounds per square foot in one greenhouse before tomato plants were placed in the soil. No AgrowPulp/Tea was added to the soil in the second greenhouse

Tomato plants in the greenhouse with soil treatment show tremendous vibrant growth and abundant fruit relative to tomato plants in the greenhouse where no soil treatment was done.
