

# Fuel BigData

Solution - Data Architecture - FAaS - Framework-As-a-Service

# FAaS - Framework-As-a-Service

- What is ?
  - a mature Data Architecture
    - Evolved in continuous iterations
- What it covers
  - DataOps
    - Cloud Formation
  - Data ETL/ELT
  - Data Science
  - Data Modeling and Cataloguing
  - Big Data Migration in Hybrid Cloud

# FAaS - Data Functional Layers

# FAaS - Data Consolidation - with Workflow managers

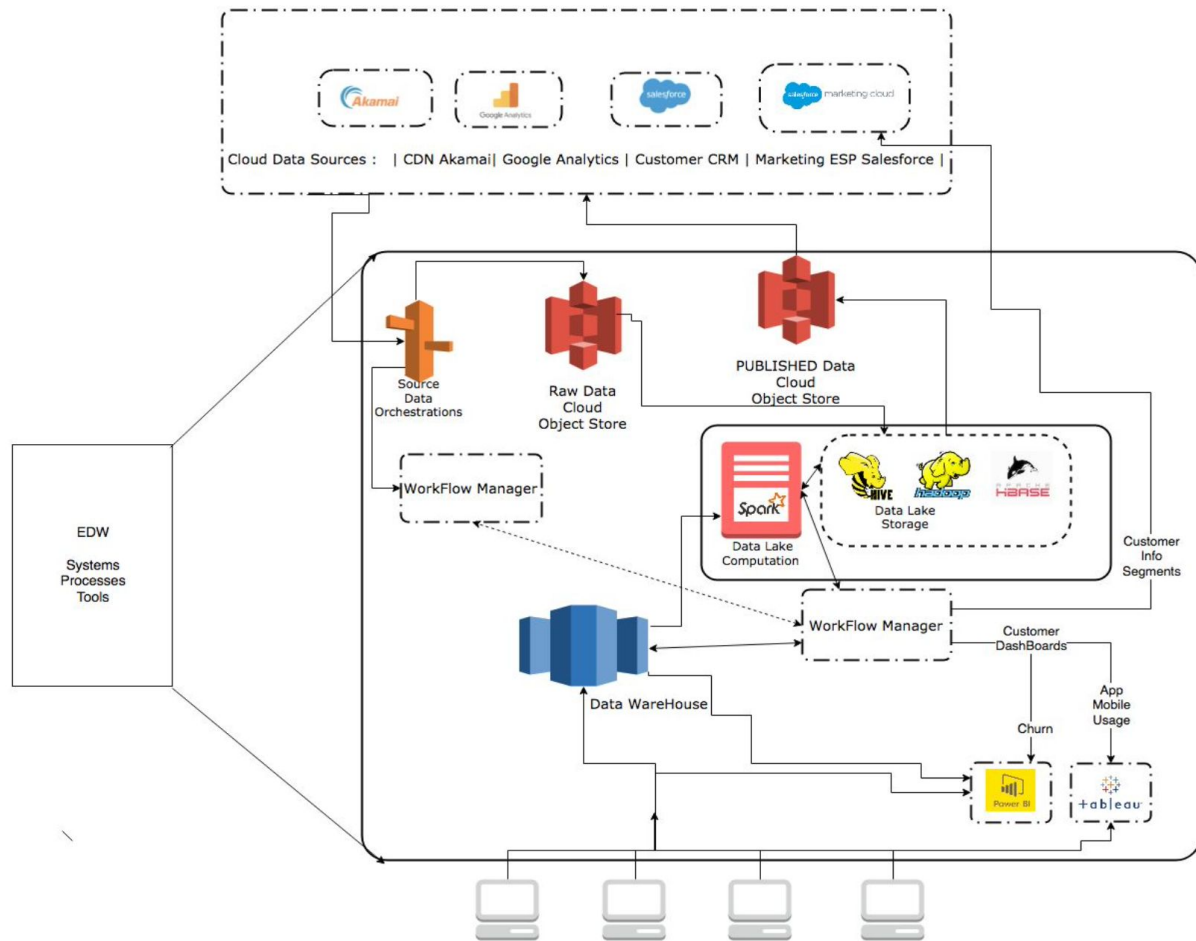

## Data Consolidation with Advanced Workflow Managers

- Apache Airflow , Apache NiFi , Luigi or other
  - Pro: Bullet-proof integration in Cloud Formation DataOps
  - Con : requires know how in all DML, operational cumbersome

## Data Catalogue and Curation

- Dremio-oss , Allation or others
  - Pro : up-front organization and curation of your data sources
  - Con : can be complex to integrate not all data sources have plugins

# FAaS - Data Consolidation - with Workflow managers

# FAaS - Data Consolidation - with Data Management Platforms

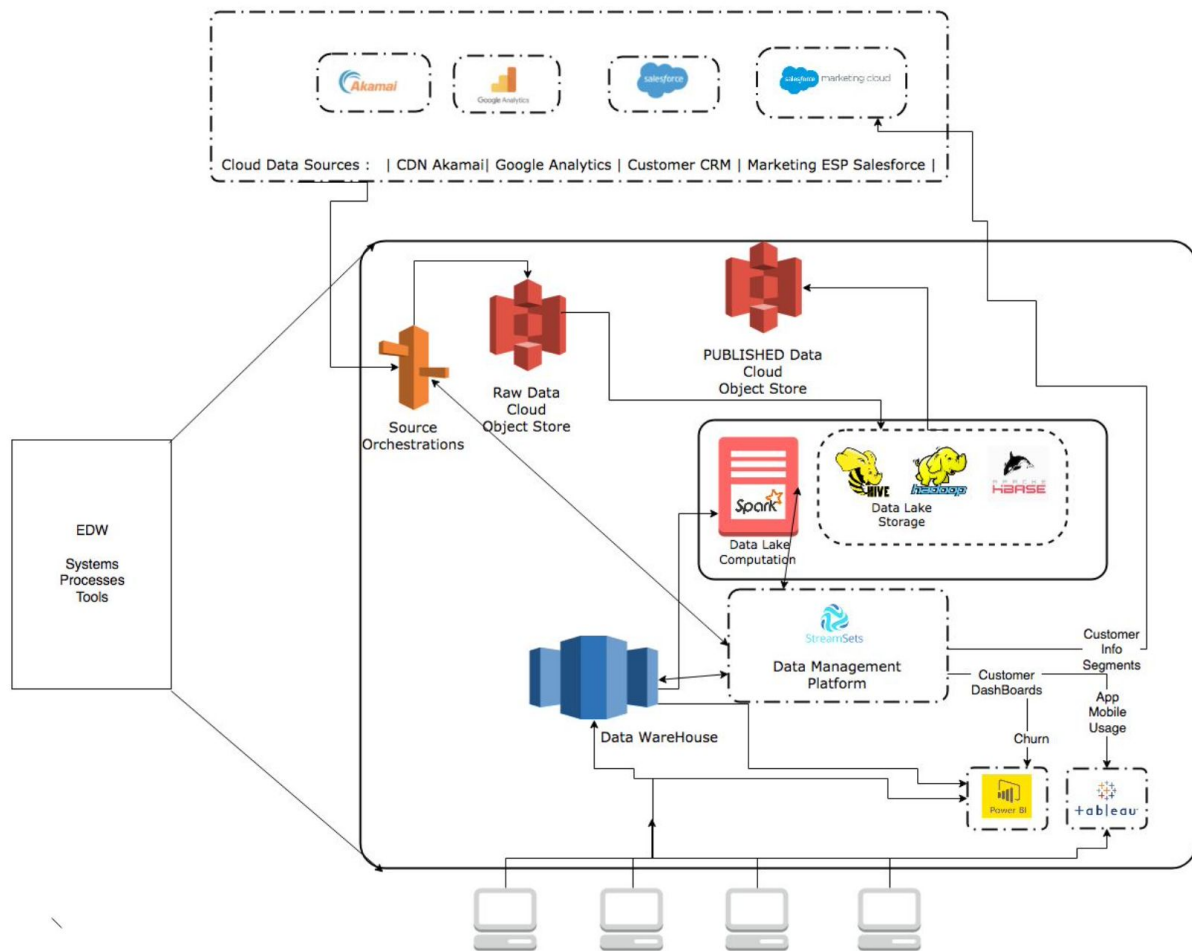

## Data Consolidation with Data Management Platforms

- Streamsets , Talend, SyncSort, Informatica and Others
  - Pro : Agility on delivery from code generation tools included
  - Con : 1 DML fit all use , can limit delivery use cases

## Data Catalogue and Curation

- Dremio-oss , Allation or others
  - Pro : up-front organization and curation of your data sources
  - Con : can be complex to integrate not all data sources have plugins

# FAaS - Data Consolidation - with Data Management Platforms

# Follow our FAaS

Framework-As-a-Service

# Thank You !
