ND = None Detected at or above the Limit of Quantitation (LOQ)

LOQ = 0.010 %Weight

The Total Potential CBD and THC reported values are calculated values to represent the theoretical total amount of cannabinoid after heating, assuming full decarboxylation of the acid to the neutral form.

Total Potential CBD = (CBDA %Weight * 0.877) + CBD %Weight

Total Potential THC = (THCA %Weight * 0.877) + THC %Weight
