

1. Proverbs 3:19-20 (Elohim the Master Architect)
2. Proverbs 8:1_12-14_22-31 (See verse 27: Compass is כִּוּנָּה , chûwg , khoog ; from H2328; a circle:—circle, circuit, compass. כִּוּן to describe a circle, to draw a circle, as with compasses. Job 26:10. (Syr. ܟܘܢܐ to go in a circle, ܟܘܢܐ a circle. Kindred roots are כִּוּן and כִּוּן). Hence קַוָּה a circle, sphere, used of the arch or vault of the sky, Proverbs 8:27; Job 22:14 of the world, Isaiah 40:22. Depths is Strong's H8415 - תְּהוֹמִים têhowm dîm têhôm , teh-home ; or תְּהוֹמִים têhôm ; (usually feminine) from H1949; an abyss (as a surging mass of water), especially the deep (the main sea or the subterranean water supply):—deep (place), depth. This is the Horizontal circle around the waters of the earth. Verse 28 lets you know this is not talking about the arch in the sky)
3. Psalms 104 (Notice verse 5 says removed not moved. The earth rotates around its own axis)
4. Isaiah 51:12-16
5. Jeremiah 31:31-37
6. Isaiah 40:21-22 (The word circle here is the same hebrew word as previously mentioned for compass. This is the vertical circle. The vertical and horizontal circle make the sphere. Knowledge of the earth being a sphere was ancient: Encyclopedia Hebraica, entry Eretz, p. 1047: "As opposed to the common view, which attributes to Columbus the innovation about Earth's spherical shape, for as long as the Aristotelian/Ptolemaic view ruled, the knowledge of Earth's spherical shape and of its (approximate) size was the province of all educated men." The first to recognize the spherical nature of Earth was Pythagoras, who lived in the 6th century BCE; see Encyclopedia Hebraica, entry "Pythagoras," p. 805. Also story of most of the world believing the earth was flat and Columbus being the only one who didn't is a historical myth. As a historian I will not even entertain this. The universe is expanding.)
7. Ecclesiastes 1:5-6 (The Gale Encyclopedia of Science. Ed. K. Lee Lerner and Brenda Wilmoth Lerner. Vol. 6. 4th ed. Detroit, MI: Gale, 2008. P4705-4706: The term wind refers to any flow of air relative to Earth's surface in an approximately horizontal direction. Breezes that blow back and forth from a body of water to adjacent land areas—on-shore and off-shore breezes—are examples of wind. The ultimate cause of Earth's winds is solar energy. When sunlight strikes Earth's surface, it heats that surface differently. Newly turned soil, for example, absorbs more heat than does snow. Uneven heating of Earth's surface, in turn, causes differences in air pressure at different locations. On a weather map, these pressure differences can be found by locating isobars, lines that connect points of equal pressure. The pressure at two points on two different isobars will be different. A pressure gradient is said to exist between these two points. It is this pressure gradient that provides the force that drives air from one point to the other, causing wind to blow from one point to the other. The magnitude of the winds blowing between any two points is determined by the pressure gradient between those two points.)
8. Job 26:7_10 (Verse 7= The earth floats in space. Verse 10= Here Yah has put a circle on the surface of the waters at the boundary of day and night. This boundary is called the Solar "terminator" since the light terminates at that point. The terminator is always a

circle, because the earth is round. On Earth, the terminator is a circle with a diameter that is approximately that of Earth. The terminator passes through any point on Earth's surface twice a day, at sunrise and at sunset, apart from polar regions where this only occurs when the point is not experiencing midnight sun or polar night. The circle separates the portion of Earth experiencing daylight from that experiencing darkness (night). While a little over one half of Earth is illuminated at any point in time (with exceptions during eclipses), the terminator path varies by time of day due to Earth's rotation on its axis. The terminator path also varies by time of year due to Earth's orbital revolution around the Sun; thus, the plane of the terminator is nearly parallel to planes created by lines of longitude during the equinoxes, and its maximum angle is approximately 23.5° to the pole during the solstices.)

9. Revelation 7:1 (This is an idiom)
10. Revelation 20:7-8 (Gog and Magog is Russia. Russia is not on the four corners of the earth.)
11. Isaiah 11:11-12 (Four corners equal north/south/west/east)
12. Genesis 28:13-14
13. 1 Chronicles 9:24
14. Psalms 107:1-4
15. Daniel 4:11_20_10-11_20-22 (Verses 11 & 20 are used by flat earthers. But in context this was a dream not literal.)
16. Matthew 4:8 (This verse is also used by flat earthers. There is no mountain on earth that would allow you to see the whole earth from the top of it.)
17. Luke 4:5-6 (See above it was a vision. A moment in time)
18. Isaiah 66:1-3 (This is a metaphor about the temple and how he dwells in a temple made without hands. Not that the earth is flat.)
19. 1 Chronicles 28:2-3
20. Exodus 25:21-22
21. Acts 7:45-49
22. 1 Chronicles 16:30-31 (This is used to say the earth cannot orbit the sun)
23. Job 9:6-9 (This proves the earth does orbit or revolve around the sun and rotates on its axis. Shaketh out of her place=orbit/revolving around the sun. Pillars trembling is the earth rotating on its axis. The pillars of the earth are the north and south pole. Definition of orbit: a path described by one body in its revolution about another as by the earth about the sun or by an electron about an atomic nucleus. Axis: an imaginary line about which a body rotates. "the Earth revolves on its axis once every 24 hours" axis of rotation (plural axes of rotation) The axis about which any body rotates. The line joining the North Pole and South Pole about which the Earth rotates daily. Pil·lar: /ˈpɪlər/ Noun; a tall vertical structure of stone, wood, or metal, used as a support for a building, or as an ornament or monument. Synonyms: column, post, pole, support, upright, vertical, baluster, pier, pile, piling, pilaster, stanchion, standard, prop, buttress. The North Pole, also known as the Geographic North Pole or Terrestrial North Pole, is (subject to the caveats explained below) defined as the point in the Northern Hemisphere where the Earth's axis of rotation meets its surface. The South Pole, also known as the Geographic

South Pole or Terrestrial South Pole, is one of the two points where Earth's axis of rotation intersects its surface. It is the southernmost point on the surface of Earth and lies on the opposite side of Earth from the North Pole. Earth's rotation on its axis is what gives us seasons. Long Exposure Photography proves the earth is rotating and is not flat.)

24. Hebrews 11:3 (The visible world is made up of atoms which cannot be seen. An atom is the smallest constituent unit of ordinary matter that has the properties of a chemical element. Every solid, liquid, gas, and plasma is composed of neutral or ionized atoms. Atoms are extremely small; typical sizes are around 100 picometers a ten-billionth of a meter, in the short scale.)
25. Job 38:16_19-20 (Springs in the ocean: In many areas of the ocean floor, wherever magma nears the seafloor, or where lava erupts directly at the seafloor surface, hot springs on the seafloor called hydrothermal vents commonly are found. Vent fields are generally associated with submarine (undersea) volcanoes where lava is erupting or preparing to erupt. Light travels. See print out)
26. Job 28:25 (Air has weight. The Bible told us this before science figured it out.)
27. 2 Samuel 22:16 (Mountains and Valleys on the ocean floor. The Mountains of the Deep Sea. Entire mountains and mountain ranges lay submerged beneath the surface of our oceans. These underwater mountains, called seamounts rise thousands of feet from the sea floor, and stand waiting, as they have for millions of years, to be explored.)
28. Jonah 2:6
29. Genesis 1:1-9 (Expanse of water separates us from the Third Heaven. See print out.)

- Verses 1-3 in the beginning the earth had not form or shape and the universe was black and void with pockets of water. Remember there is no sun or moon yet so the days are not 24 hour days. Also in the beginning before day one of creation; heaven and the void earth already existed. The earth can be billions of years old.
- Verses 3-5 This light was not sunlight. Because the sun was not created yet. The Black hole behind the expanse of water that separates the third heaven from the second heaven is a quasar. A quasar (/ˈkwɛɪzɑːr/) (also known as a quasi-stellar object abbreviated QSO) is an extremely luminous active galactic nucleus (AGN). It has been theorized that most large galaxies contain a

supermassive central black hole with mass ranging from millions to billions of times the mass of the Sun. In quasars and other types of AGN, the black hole is surrounded by a gaseous accretion disk. As gas falls towards the black hole, energy is released in the form of electromagnetic radiation, which can be observed across the electromagnetic spectrum. The power radiated by quasars is enormous: the most powerful quasars have luminosities thousands of times greater than a galaxy such as the Milky Way. In physics, electromagnetic radiation (EM radiation or EMR) refers to the waves (or their quanta, photons) of the electromagnetic field, propagating (radiating) through space, carrying electromagnetic radiant energy.[1] It includes radio waves, microwaves, infrared, (visible) light, ultraviolet, X-rays, and gamma rays. The light in these verses were probably gamma rays.)

- Verses 6-9 Sometime between day two and day six is when the Satan probably led his rebellion. Isaiah 14:13-14 Informs us that Lucifer was on earth during before the rebellion because he had to ascend up above the clouds. The clouds were created on day two. We also know God told Adam after creating him not partake of the Tree of Knowledge of Good and Evil which was Satan. So this means Satan and his angels already fell.)

30. 2 Corinthians 12:1-2 (Referring to Christ/Third heaven)

31. John 3:13

32. Psalms 148:1-5

33. Genesis 1:9-13 (Live Science: This story was updated at 9:40 a.m. E.D.T. on Monday, Sept. 10. "Every day, the Earth spins once around its axis, making sunrises and sunsets a daily feature of life on the planet. It has done so since it formed 4.6 billion years ago, and it will continue to do so until the world ends — likely when the sun swells into a red giant star and swallows the planet. But why does it rotate at all? The Earth formed out of a disk of gas and dust that swirled around the newborn sun. In this spinning disk, bits of dust and rock stuck together to form the Earth, according to Space.com, a sister site of Live Science. As it grew, space rocks continued colliding with the nascent planet, exerting forces that sent it spinning, explained Smadar Naoz, an astrophysicist at the University of California, Los Angeles. Because all the debris in the early solar system was rotating around the sun in roughly the same direction, the collisions also spun the Earth — and most everything else in the solar system — in that direction.")

34. 2 Peter 3:5-7

35. Genesis 1:14-19 (Notice it says for seasons and calendars. From Live Science: When a Mars-size object collided with Earth 4.5 billion years ago, it knocked off a chunk that would become the moon. It also tilted Earth sideways a bit, so that our planet now orbits the sun on a slant. Those were two huge changes. Now, over the course of the year, the amount of sunlight striking the Northern and Southern hemispheres varies as they wobble back and forth — first the Southern Hemisphere leaning sunward, then the Northern. This cycle drives Earth's seasonal variation.)

36. Genesis 1:20-23 (Life or the Evolutionary process on earth began in the waters. It appears the earliest form of life in the tree of life were thermophilic or hyperthermophilic organism, which means they lived in systems composed of hot water.)
37. Genesis 1:24-28_2:7/19 (Remember God made every creature after its kind. That means all species have a common ancestor. The evolutionary history of life on Earth traces the processes by which living and fossil organisms evolved, from the earliest emergence of life to the present. Earth formed about 4.5 billion years ago and evidence suggests life emerged prior to 3.7 (Although there is some evidence of life as early as 4.1 to 4.2 billion years ago. The similarities among all known present-day species indicate that they have diverged through the process of evolution from a common ancestor. Approximately 1 trillion species currently live on Earth[9] of which only 1.75–1.8 million have been named and 1.6 million documented in a central database.[12] These currently living species represent less than one percent of all species that have ever lived on earth. Humans, land animals, and birds share a common ancestor. That ancestor is dirt.)
- Remember until Adam transgressed the Law or Yah's command and partook of the tree of Knowledge of Good and Evil there was no death on the planet. Adam and Eve as well as all other living organisms could have been on the planet for thousands or millions of years after Day 6/7 of creation.
 - Also remember prior to the flood the average human lived between 500 and 900 years old. We do not know how that long of an aging process would affect the anatomy of the body. This might account for the other types of homo-genuses prior to Homo-Sapiens such as Homo-Habilis, Homo-Erectus etc... The dating of these fossils might appear older to scientist because of the Flood.)
38. Colossians 2:16-19 (Verse 18 do not let these false teachers who think they have secret knowledge or some new revelation spoil you of your reward. I.E. the earth is flat. The full moon is the new moon. Changing calendars etc...)
39. 2 Timothy 3:6-7 (Pastors against science)
40. 2 Peter 2:10-16
41. Titus 1:13-16
