

EXCELLENT HEXAGON WRENCHES SINCE 1958

MADE IN JAPAN

A proud recipient of Monozukuri (Craftmanship) Award by the governor of Osaka, Japan.

EIGHT TOOL is a manufacturer of the world's highest quality hexagon wrenches and Torx / Torx Plus wrenches.

EIGHT has specialized in hexagon wrench manufacturing for over 60 years and has provided the world's highest quality tools for all industries. Made of originally-developed special alloy steel "SNCM+V" that realizes supremely executed balance of torsional strength and abrasion resistance, EIGHT's high quality standard and 2,000+ product lines have earned recognition as a trusted brand from industry professionals all over the world.

Having its headquarters in Osaka, Japan, EIGHT manufactures all products in Japan under the strictest quality control. EIGHT strives to service professional users and assist in enhancing productive and efficient factory operations. EIGHT TOOL America services U.S. customers from offices and warehouses in Los Angeles, CA and Bay City, MI.

SNCM+V®

Special alloy steel exclusively developed for EIGHT hexagon wrenches. Outstanding wear resistance and torsional strength give EIGHT that superior quality expected by our professional customers.

HRC 55 ~ 60

Rockwell "C" Scale 55~60 Degree : EIGHT's product hardness standard exceeds others to provide exceptional wear resistance.

2,000 + Items

Proud specialist of Hexagon, Torx, and Torx Plus wrench manufacturing. EIGHT's product line exceeds 2,000 items to accommodate various needs of our customers.

COLORED TAPER HEAD HEX KEY WRENCHES with EXTENSION PIPES

TLC-S9NP and TEL-S9NP series are EIGHT's most popular COLOR hex extra long key sets.

Original TAPER HEAD feature enhances ball point function. This innovative head design enables pre-fastening to final fastening of a bolt by increasing the surface contact area to the bolt face. Each set comes with two "Cheater Bars."

TAPER HEAD HEX KEY WRENCHES

EIGHT's original feature that enhances ball point function. This innovative head design enables pre-fastening to final fastening of a bolt by increasing the surface contact area to the bolt face. Increasing the contact area not only enhances the fastening strength but also prevents both the wrench head and the bolt face from wearing out.

“TAPER HEAD”

1. Tapered Surface

Tapered Surface is designed to increase the surface contact area for the usage with angle.

2. Flat Surface at the Widest Part

Flat Surface at the Widest Part ensures the surface contact for the usage without angle.

3. Flat Surface at Neck Bottom

Flat Surface portion at the Neck Bottom enhances torque resistance to prevent the neck from breaking in high-torque usage.

4. Thick Neck Diameter

Thick Neck Diameter enables final tightening, while the ball-point head is designed only for pre-tightening.

BOLT CATCH HEX KEY WRENCHES

A BOLT CATCH is EIGHT's unique feature that the wrench head "catches" the cap bolt. By combining the BOLT CATCH feature with EIGHT's original TAPER HEAD, the wrench achieves both efficient operation and high torsional resistance.

A special "fit ring" that catches cap bolts to enable single-handed operation while preventing bolt in loss in narrow spaces.

(* Fit ring available to wrenches 2.5, 3, 4, 5, 6, 8, and 10mm, as well as 3/32, 1/8, 5/32, 3/16, 1/4, 5/16, and 3/8 inches.)
