EXLOG
OVERWATCH

24/7 SECURITY

Using advanced video analytics and new audio technologies, along with real time event monitoring, to transform security systems into smart platforms which can provide real time data for safety and security

VIDEO VERIFICATION

Exlog Global Response Center (GRC) personnel respond to triggered events by accessing the video surveillance system and confirming an event requiring a response is taking place.

If confirmed, the central station notifies local authorities to respond to the location. This method greatly increases response time and lessens the number of false alarms.

RESPONSE CENTER MONITORING

Exlog GRC personnel monitor and immediately respond to intrusions via network audio.

Personnel notify contacts on a predetermined notification list, police, fire or other response entities as identified by an agreed upon set of protocols.

GUARD OVERWATCH

The GRC integrates on-site security personnel with active video surveillance event monitoring, increasing visibility of the locations.

This approach enlists the camera sensors as a force multiplier to the guard force and allows for more coverage with less manpower.
