

Safety, Security & Maintenance

Safety

At JET Transport we are passionate about safety. We believe that informed and trained personnel are always aware of their surroundings and take the necessary care to avoid injury or loss.

Each month, our safety team meets to review any incidents, claims or injuries to evaluate cause and to institute corrective action. In addition, we hold quarterly safety meetings for the entire organization so employees and contractors both, can benefit from continued safety awareness.

Security

JET Transport believes, maintaining a secure operation is paramount to managing a safe and reliable intermodal solution for transportation, warehousing, and distribution.

Lot Storage: With capacity for 300 trailers, JET's security is visible starting with the controlled gate access and fenced yard.

Lot Security: The JET Transport's lot is maintained 24 hours 7 days a week with video surveillance. At each staging point in the yard a digital image is available, recording the activities in the yard.

Access Control Points: Access to the yard is restricted to employees and approved contractors. These individuals are issued a key-card access which has their photo identification.

All visitors must page the office from the gate entryway to gain approved access. On entry into the JET offices, visitors are asked to sign in, showing arrival and departure times. Access beyond the office lobby is restricted and visitors must be escorted.

Information Technology & Security: All systems used in the execution of the business require individual user log in ID's. Systems are scanned for threats and complete back up procedures are in place.

Maintenance

Our equipment we believe is a vital part of how we present ourselves to the market. Sure the look of the equipment is critical, but for us how the vehicle functions is even more critical because so many parts of our business depend on the reliability of our equipment to get the job done. We've invested heavily in our equipment and the people who do the work. Our onsite mechanics are dedicated to keeping our fleet in top shape. Our record for minimum breakdowns is only improving as will continue to invest and upgrade.
