Capabilities Statement

Navon Technologies provide the experience and technical expertise to help design, implement and maintain Enterprise, Service Provider, Cloud, and On-prem Infrastructure. Our service offerings are designed to help achieve and sustain operational excellence for large, complex networks and systems utilizing automated, scalable, reliable, and secure solutions from our technology partners, Cisco, VMware, Nutanix, Red Hat, KVM, Ansible, Puppet/Chef, Kubernetes, Palo Alto, IXIA, HP, Dell, Splunk, Citrix, and Service Now.

We strive to deliver unmatched Engineering, Architecture, Application Development, Automation, Consulting, and support services to public and private sectors.

Today, Navon's experience supporting the government has been in a subcontracting roll working with medium to large prime contract companies providing services for campus, data center, cloud environments(AWS, Oracle, Google Cloud, and Azure). Our decades of experience provides service providers and enterprise customer environments cutting edge solutions.

We create prototypes and deploy solutions with complex system integration and transition requirements. Technologies we specialize in are capacity planning, WAN, QOS, Segment Routing(SR), MPLS, Virtualization, virtual desktop infrastructure(VDI) System Testing, Java, JavaScript, SQL, Python languages, Artificial Intelligence(AI)Machine Learning(ML), and Cyber Security.

We also provide program/project management services All our projects are managed by experience and certified project managers, using agile and waterfall methods to ensure our customers projects are delivered with high-quality, on time, and under budget.

- Network/System/Security DevOps

Services

Navon Technologies is an AWS (Amazon web services) and Microsoft Azure registered partner that employs Solutions Architects/CCIE's (Cisco Certified Internetwork Experts) that are focused in the service provider/data center/enterprise arenas, as well as AWS/Azure Clouds. We have experts that research, develop, test, integrate, automate, and orchestrate physical/virtual endpoints and network devices.
