

Prevent Plant Acres? - Cover Crop Options

Unfortunately, prevented plant is looking to be prevalent in Grant County and surrounding areas affected by excess moisture. We have sourced some cover crop mixes and individual species to cover all your needs. Read below to see our recommendations.

If you are interested in a custom mix, feel free to contact us or Barrett Farm Supply!

It is essential to manage PP acres for 3 main reasons:

- Weed Control
- Manage Soil Integrity
- Prevent Fallow Syndrome for 2023

Preventative Plant Weed/Soil Management System

Kill the seed bank, spraying 1-2 weeks before seeding to ensure a clean start to the following year and less competition for your cover crop.

Meet our 2022 Summer Intern!

Jaime Johnson will be helping us this summer on special agronomy projects. She will be a junior at WCA next fall and is looking forward to helping us ESPECIALLY in the next few weeks

utilizing our drones to do real field stand count analysis!

Jaime loves cover crops!
