

ASM 825A DIGITAL

[Performing a SCOF Test](#)

When it comes to floor testing or floor friction testing to monitor floor safety for slip and fall prevention, one needs a proven Tribometer or Slip meter to determine if a floor or walkway is safe. Our meters are proven. We have been manufacturing slip meters (tribometers) since 1993. Our meters are durable, reliable, repeatable and fully supported. Floor safety programs and floor testing together equals safe floors.

Slip and fall prevention is our goal.

365 nm LED Black Lights >>3 Watt Black Light

This is one heck of a black light. 365nm LED lights are much more expensive than the traditional 395nm LED lights. This is a very strong (3 watts), compact monster that even comes in its own carrying case. It is one of the nicest we have seen. This comes with a battery, charger (see above) and even has its own carrying case (see below). This even has a battery cartridge for 3 AAA batteries if you chose to use those rather than the re-chargeable

battery. Slip this into your luggage and you can use it in hotel rooms to see how well they clean - or anything else you may want.

This has its own charger. Charge it in a regular electrical outlet, or you can just supply your own, 3 AA batteries and you will never find yourself with a dead battery again.

This is a quality instrument. The first time you take it out of its case, you will realize that this is what we call a "classy" light. Three watts of power for a 365 nm light is strong. This will do almost any job you have in mind. Enjoy the instrument since you will never need another one like this (once you purchase this one).
