1. Can LeafFilter Be Installed on My Current Gutters?

Most homeowners want to know whether LeafFilter can be installed on the gutters they already have — and in most cases, the answer is **yes**.

How LeafFilter Evaluates Your Existing Gutters

During your appointment, a LeafFilter estimator performs a full inspection of your current gutter system. They check:

- Structural condition
- Proper pitch (water flow direction)
- Downspout placement
- Signs of separation or sagging
- Whether your gutter style is discontinued or damaged

If your gutters are in good working condition, LeafFilter can be installed without replacing them.

How LeafFilter Rehabs Your Gutters Before Installation

If your gutters pass inspection, LeafFilter will:

- Clean the inside of the gutters
- Flush out debris
- Clear and tighten downspouts

- Tighten loose gutter sections
- Correct the pitch for proper water flow

This “rehab” process ensures your gutters are functioning properly before the micromesh system is installed.

Installation on Existing Gutters

Once your gutters are cleaned, repaired, and properly pitched, LeafFilter installs its patented stainless-steel micromesh system directly on top. This allows homeowners to:

- Keep their existing gutters
- Avoid unnecessary replacement costs
- Gain long-term protection from clogs, overflow, and water damage

For most homes, the estimator’s job is simply to determine whether your gutters can be cleaned, repaired, and reused — and **most gutters qualify**.

2. Why LeafFilter Outperforms Other Gutter Guards

Not all gutter guards are created equal. Many rely on plastic, perforated metal, or screens that warp, crack, or allow buildup over time. LeafFilter is engineered differently.

Patented Stainless-Steel Micromesh

LeafFilter’s micromesh blocks even the smallest debris, including:

- Shingle grit
- Pine needles
- Pollen
- Roof oils
- Fine organic particles

The mesh has **no holes, gaps, or openings**, so nothing can stick to it — and water flows freely even during heavy rain.

Why Other Gutter Guards Fail

Traditional gutter guards often:

- Sit flat and collect buildup
- Warp or crack in heat
- Allow debris to enter through perforations
- Trap pine needles
- Require frequent cleaning

LeafFilter's angled, reinforced design prevents these issues.

Installed on EnduraLast™ Seamless Gutters

LeafFilter is installed on top of exclusive EnduraLast™ Seamless Gutters — a heavy-gauge .032 aluminum gutter system custom-formed at your home for a perfect, leak-free fit.

EnduraLast™ Coating Advantages

EnduraLast™ uses proprietary resin technology for:

- Scratch resistance
- UV resistance
- Mold and stain resistance
- Tiger-stripping prevention

In scratch tests like the **ASTM Nickel Rub Test**, EnduraLast™ outperformed PVC and poly coil finishes, remaining scratch-free and unchanged.

What LeafFilter + EnduraLast™ Protect Against

Together, they protect your home from:

- Clogs
- Overflow
- Leaks
- Staining
- Exterior wear
- Long-term water damage

This pairing creates one of the strongest gutter protection systems available today.

3. What Are EnduraLast™ Seamless Gutters?

EnduraLast™ Seamless Gutters are LeafFilter's exclusive premium gutter system, engineered for long-term durability and superior exterior protection.

Heavy-Gauge .032 Aluminum

Each gutter is made from thick, durable aluminum and custom-formed on site for:

- A perfect fit
- Fewer joints
- Fewer leak points
- A cleaner, seamless appearance

The EnduraLast™ Gutter Coating

The EnduraLast™ coating is what sets this system apart. Built with proprietary resin technology, it provides:

- Scratch resistance
- UV fade resistance
- Mold and stain resistance
- Tiger-stripping prevention

This coating outperformed PVC and poly coil finishes in real-world scratch tests, including the **ASTM Nickel Rub Test**, remaining scratch-free and unchanged.

Protection Against Real-World Conditions

EnduraLast™ is engineered to resist:

- Sun exposure
- Dirt and oils
- Salt spray
- Pollution
- Humidity
- Coastal moisture

Your gutters stay cleaner, look newer, and last longer.

Available Colors

EnduraLast™ Seamless Gutters come in premium colors:

- White 30°
- Linen
- Clay
- Musket Brown
- Black

These options match most home exteriors while providing superior protection.

4. Is LeafFilter Available in My Area?

LeafFilter is one of the most widely available gutter protection systems in North America, serving most of the United States and Canada.

Nationwide Coverage

Whether you live in a major metro or a rural community, LeafFilter's network of trained installers can:

- Evaluate your home
- Inspect your existing gutters
- Recommend the best long-term solution
- Install LeafFilter or EnduraLast™ Seamless Gutters

Check Your Service Area

United States Service Areas:

Canada Service Areas:

<https://professionalseamlessgutters.com/service-areas-%E2%80%93-canada>

What Happens During the Evaluation

If your gutters are in good condition, LeafFilter can:

- Clean and flush debris
- Tighten loose sections
- Clear and adjust downspouts
- Correct gutter pitch

If your gutters need a stronger foundation, LeafFilter offers EnduraLast™

Seamless Gutters for maximum durability.

Personalized Recommendations

No matter where you're located, LeafFilter's team provides a recommendation based on:

- Your home's gutter condition
- Your roofline
- Your environment
- Your local climate

5. Final Steps & Free Estimate

Your home's gutters play a critical role in protecting your foundation, roofline, siding, and landscaping. LeafFilter™ and EnduraLast™ work together to provide:

- A seamless, leak-free gutter system
- A clog-free micromesh protection system
- Long-term durability
- Reduced maintenance
- Protection against overflow and water damage
