

PARTING STONE®

Looking for a clean alternative to ashes? Solidified remains from Parting Stone® enable you to feel close and connected to your loved one in daily life. Parting Stone's unique process solidifies 100% of the ash into a form of remains that resembles a collection of 40-60 stones. Share your solidified remains with family and friends and let everyone heal in a way that is special to them.

The Science

Parting Stone® Solidified Remains

Step 1: Refinement

We remove foreign contaminants like staples and screws from the cremated remains. The granule "ash" is refined into a powder.

Step 2: Stone Forming

A small amount of binder is added to the ash, the remains are mixed into a clay-like material, and the stones are formed.

Step 3: Solidification

The stones are heated in a kiln giving the solidified remains their hardness and permanence.

Step 4: Return Home

Finished solidified remains are cleaned and polished. Your stones are ready to come home and be shared with family and friends.

What color are your stones? The appearance of each collection of solidified remains is 100% natural. People can result in different hues and textures making each stone uniquely beautiful.
