Teenagers and Young Adults with Cancer Patient and Public Involvement Group

Would you like to make a difference to cancer research and patient care?

Why do your views matter?

There are many different different cancer research and healthcare service improvement projects in the East of England region that need your input as a teenager or young adult who has or had cancer. As the people affected, we need your help to make sure that these projects are asking the right questions and tackling the important issues.

Why do we need to work together?

Patients, the public and professionals work together to:

- Listen and act on patient experiences
- Reflect the diversity of the community
- Develop partnerships
- Enhance research relevance and impact
- Support communication and engagement

What does the group do?

By signing up, you will join our list of potential contributors to hear about a range of different project opportunities, some specific to a cancer type, and others more general.

These could include:

- Collaborating on patient documents
- Engaging in community outreach
- Supporting study and trial design
- Developing patient-led projects
- Providing a lived experience view on NHS service improvement

Time commitment

Details for each project are provided upfront. Commitments may vary from a few hours to multiple meetings or events - it's your choice.

Location

All projects will be East of England based. Projects may not require you to travel and may be done remotely.

Expenses

Travel and involvement expenses will be reimbursed.

Register your interest

Individuals aged 16-24 years with cancer experience as patients, and significant others of those aged 16-24 years who have had cancer, are welcome to participate.
