

## ACTIVITY 2

1.D

2.B

3.C

4.D

5.The Three questions are:

A) What are rain shadows?

B) How are clouds formed?

C) How does the air move into the mountains?

6.The drawing is useful because it shows how the water cycle starts. The water cycle has a continuous movement. First liquid water evaporates to water vapor, then it forms clouds, and precipitation is back into forming rain and snow.

**Commented [1]:** Items 1-4 are correct (Good job!), but students are expected to include textual evidence to support their answers.

**Commented [2]:** How would these questions help you determine if a person live in a rain shadow? Please review this item with the tutor.
