

ACTIVITY 4

1.A

2.D

3.C

4.B

5. I don't think so the navy test were responsible for whales death .Biologist Darlene Ketten of the National Marine Fisheries Service said that there might be a link between the death of the whales and the sound generated by Navy sonar tests.

Whales are highly sensitive to sound, and very loud noises created by the sonar tests could have disoriented the whales and even caused ear damage. Biologist Darlene Ketten of the National Marine Fisheries Service said that there might be a link between the death of the whales and the sound generated by Navy sonar tests.

6. Marine biologists reported today that the seven whales who died last March in the Bahamas probably were disoriented by a "distant explosion or an intense acoustic event." Scientists said they will investigate to find the cause of the strange behavior. They plan to conduct necropsies on some of the whales to determine the cause of their deaths.

**Commented [1]:** You should be writing out your assignment instead of just including answers. You will need to include textual evidence to show how your answers are correct.

**Commented [2]:** Where is your citation? You need to include the paragraph number e.g. (3).
