Pollution Prevention

Does the facility have a documented pollution prevention plan?

Yes

a) Please check all that apply

Plan was prepared or implemented on a voluntary basis.

b) Did the facility update their plan in the current reporting year?

Yes

c) Does the plan address substances, energy conservation, or water conservation?

Substances (provide the name of the primary Substances in the comments field below)
Energy conservation
Water conservation

Please summarize your pollution prevention plan. If you selected "Substances", please specify the substances that were addressed in your plan (this information will be publicly available).

Monarch currently reuses all metal scraps that are generated during the manufacturing process. These materials are re-introduced into the process. Damaged parts or stock that is not used are also re-introduced into the process.

Did the facility complete any pollution prevention activities in the current NPRI reporting year

Yes

Pollution Prevention Activities

Category	Activity	Name and description of the other activity
Equipment or Process Modification	Other (specify in comments field)	The equipment and process cannot be changed as the final product is dependent on specific process specifications.
Good Operating Practice or Training	Other (specify in comments field)	All new employees are paired with an experienced employee for training. Monarch uses policies and procedures to maximize efficiency during production.
Inventory Management or Purchasing Techniques	Other (specify in comments field)	All zinc received is used over the course of the month. There is no shelf life for zinc, and any inventory unused is re-introduced into the process for new product.
Materials or feedstock substitution	Other (specify in comments field)	No suitable alternatives available to achieve current quality needs.

Category	Activity	Name and description of the other activity
On-site Reuse, Recycling or Recovery	Other (specify in comments field)	The current technological requirements, such as equipment, the creation of VOCs, space, and limited reduction makes this a technically infeasible option at this time. Monarch currently reuses all metal scraps that are generated during the manufacturing process. These materials are re-introduced into the process. Damaged parts or stock that is not used are also re-introduced into the process.
Other Pollution Prevention Activities		
Product Design or Reformulation	Other (specify in comments field)	The product is designed to meet individual client specifications. The amount of zinc used in the product is required for strength and quality requirements and cannot be reformulated.
Spill and Leak Prevention	Other (specify in comments field)	Zinc that is spilled during the process is cleanup up and reintroduced into the process.
