

To Whom it may concern:

It's a pleasure to recommend Paul Shulins for your tower inspection project. Having known and worked with Paul off and on for over 35 years I can attest to Paul's unusually high technical competence. Also, being a Pilot Paul's observance of care & proper procedure is most notable, always paying attention to detail and watching for any possible risk or liability.

Paul recently inspected one of my older installations in New Hampshire to check for stability and any possible sign of wear or weakness. It's a comfort knowing that we've done this diligence to head off any problems before turning into relevant threats. I only have one regret:

Last summer I built out a new FM station here in New Hampshire. Regardless that all the equipment was new and the antenna system's assembly and installation was overseen by the antenna's manufacturer (Shively), it suffered a defect during its first day of operation causing it to burn up and completely fail. There was literally a fire! Had I worked with Paul during this initial check-out of the antenna, this entire unpleasant and costly event could have been avoided!

I can't strongly enough recommend that upon commissioning of any new antenna or transmission line system that you employ Shulins Solutions to check it out before giving your "bread & butter" a bill of good health. I'd say the same for regular inspections.

Feel free to contact me if you have any questions.
