Grants:

Title: Infinity Total Ankle Replacement Long Term Follow Up (ITAR)
 PI: Nicholas Strasser, MD
 Study Period: 2017 – ongoing
 Role: Treating surgeon; Site investigator of a multi-center prospective study
 Funder: Wright Medical

Summary: Long Term Follow Up (10 years) of the Wright Medical Infinity Total Ankle Replacement. Slocum Center currently serves as part of a multi-center prospective follow up of the Infinity Total Ankle Replacement. Currently we have enrolled 17 patients as of 2017.

Title: The Effects of Altering Step Rate on Achilles Tendon Stress During Running

PI: Kathryn Farina

Study Period: 2020- 2022

Role: Dissertation Committee Member

Funder: University of Oregon

Summary: Investigate the effects of altering step rate on rearfoot motion and how this affects stress in the Achilles tendon in both healthy runners and those with Achilles' tendonitis.

Title: Biodegradable Pledget Sensor to Monitor Loading in Tendon and Ligament Sutures for Post-Operative Rehabilitation

PI: Kaylee Meyers

Study Period: 2022-present

Role: Dissertation Committee Member

Funder: University of Oregon

Summary: Investigate the feasibility of implantable sensor to allow for monitoring of postoperative tendon healing.

Title: Wearable Technology and Surgery Recovery

PI: Cameron Nurse

Study Period: 2024

Role: Dissertation Committee Member

Funder: Vanderbilt Department of Engineering

Summary: This research revolves around developing wearable technologies that monitor or reduce injury risk. Dr. Nurse built off previous work done by Dr. Emily Matijevich which aimed to monitor musculoskeletal loading with the use of wearable sensors and machine learning. Dr. Nurse also led the development and validation of an ankle exoskeleton that reduces Achilles tendon loading during walking and running while remaining reliable, usable, and comfortable when used in real-world environments. Dr. Nurse's final chapter looks to estimate cumulative loading on the tibia during everyday tasks using a smartwatch coupled with machine learning techniques, with the hopes of implementing this capability to monitor patients post-tibial stress fracture surgery.
