

HOW TO CLEAN AND CARE FOR YOUR FLOORS

Engineered Flooring

Hardwood flooring is appreciated for its natural beauty and integrity. Each piece is truly unique. Every species of wood is born with subtle variations – color, tone, graining, knots, streaks, blemishes, and mineral stains. Like fine wine, high-quality hardwood ages fabulously and gains remarkable character over time.

The variations in hardwood flooring may become more distinct over time when exposed to direct sunlight. If you would prefer to reduce the potential effects of sun, you may do so by occasionally rearranging your furniture and rugs.

- Maintain the climate in the room at a stable level. Drastic changes in temperature and humidity can lead to changes in your hardwood flooring.
- Place natural fiber rugs with soft bottoms at entry points to catch dirt, grit, and moisture.
- Sweep the wood floor with a gentle and absorbent mop. If you would prefer vacuuming, make sure it is done with a machine designed to be safe on hardwood flooring.
- Wipe up food and spills promptly.
- Avoid wet mops.
- Never use wax, oil, or petroleum-based cleaning products.
- Add felt or rubber padding to bottom of furniture, including chair and table legs.
