

Garage Door Replacement Guidelines

Garage doors can be wood or metal, in any style, from any manufacturer. Metal doors need to be double or triple layer construction. (this help prevent denting and currently qualifies you for an energy tax credit)

Garage doors must be painted the same color as the base or trim color of the house. Doors purchased that match body color, or trim color, do not need to be painted. You should paint the garage doors as soon as they are replaced. **You must replace BOTH DOORS if you have 2.**

Please fill out an [ACC Change Proposal Form](#) prior to installation.
