

Tech In The News

Assignment: Stanley Robotics

Headphones Needed: **YES** **NO**

Step One:

Stanley Robotics is a venture-backed company that was created in January 2015, and is headquartered in Paris, France. It is developing an automated valet parking service with robots that can move any vehicle and increase capacity in existing car parks by up to 50%, while revolutionizing the user experience. The three founders, Clément Bousard (CEO), Aurélien Cord (CTO) and Stéphane Evanno (COO), all have previous experience in driverless technology (at top research institutes and with a world-class industrial corporation).

Step Two:

Review all sections of the company Website. Create a Word/Google Doc. Answer the five W's in your summary: Who,What,Where,When,Why. Would you use this type of service at the airport? List five pros and five cons of the technology at the airport. List five other places this technology would work. Save your document.

Step Three:

Share your document with a partner; review your list of other places to see if your partner has other locations. Discuss why or why not the technology would work at other locations.

Step Four:

Send your document(s) each person to Mr. Amerikaner, from your Google Drive.
