Assignment: Is It Real or Fake

Headphones Needed:

YES

NO

Step One:

[WATCH THIS VIDEO](#)

Step Two:

StRead the Article at the bottom of this document
Review the information

Step Three:

With a partner, discuss if the scanner will help or hurt GOODWILL determine if a product is real or fake. Write your comments in a Google doc.
Discuss and write five (5) other uses for the fake detector.

Submit Your

RealorFake-Yournames

Assignment :

To Mr. Amerikaner
Using:

Gdrive

Nicole Suydam, CEO of Goodwill of Orange County

"Everybody knows Goodwill as the retail stores... but most people aren't aware that we also have an e-commerce platform called shopgoodwill.com," explained Suydam.

The website is sort of an eBay, but for the most unique Goodwill inventory nationwide. It did 115 million dollars in sales last year.

Now, in an effort to weed out counterfeits, they're using technology from a company named Entrupy.

"Really we've created the only technology to authenticate luxury goods anywhere, anytime," said Deanna Thompson of Entrupy.

The process is pretty simple: workers use a modified iPod Touch outfitted with special software and a close-up lens to take various pictures of the item.

This includes microscopic shots of the outer and inner materials, the stitching, logos, embossed text, zippers, buttons and more. The process only takes a minute.

"We took about 4 years collecting data and we have taught algorithms to determine whether an item is authentic or counterfeit," explained Thompson.

Once an associate has taken the pictures, the data is sent to the cloud for verification. Results are returned in seconds.

"Data is authenticating it. It's removing the human emotion, so it either is or it isn't," said Thompson.

We tested several designer purses at the shopgoodwill.com warehouse in Orange County. Some of the items came back as authentic, others were deemed "not verified." This means that the system couldn't say for sure that they were the real thing, and Goodwill won't sell them.
