

Ultra-Jam Stopper (set)

Ultra-jam stopper set.

New design for even more adjustability.

2 inches longer than all other manufacturer designs.

Use the set on one distributor assembly or use them on a pair of distributors to combat thicker distributor belts that tend to make the pin roll off the side of your distributor.

Instructions

Use tape Measure to mark holes for drilling through side rail. Approximate estimation of first hole is 7.5" from end of orientor pan side rail.

Slotted holes will allow for variation of hole placement. This also allows for height adjustment for clearance of pan side.

Note*

Ultra-Jam Stopper is placed on the Lead side of Distributor. Odd Lane= 7 Pin Side, Even Lane= 10 Pin Side.
