Student Material:

Student Workbook

Prerequisites:

None- This is an entry-level course

Cyber Security Plus Training

Cyber-attacks are growing in number and sophistication, and attackers are focusing more deeply inside any institution with financial strength. Attackers targeted employees using sophisticated attacks that take advantage of user's weak security awareness and common sense when it comes to cyber security.

Cyber Zones developed this outstanding training course which aims to provide the proper techniques and latest cyber security threats in a friendly and simple manner to those IT users or users that doesn't have any technical knowledge regarding IT in general, this training course will help the attendances to get a security aware regarding the latest threats that might target them and their organizations.

CS+ training course covers the most important areas that each computer/mobile phone users should know and be aware in order to allow each employee in the company to act as the first line of defense; the following sections are covered within CS+:

Section 1: Cyber Security Threats /RED team Vs Blue Team

Section 2: Type of attacker and attackers methodology

Section 3: Cyber Security Terminology

Section 4: Risk management and Security policies/ procedures

Section 5: Defense against attacks & how attackers hide their locations - Dark Web discussion

Section 6: Malware and layer 2 attacks - Simple coverage.

Section 7: Basic Incident handling

Upon Completion Trainees will:

- Identify the maturity level of your existing awareness program and decide where to take it next.
- Explain the difference between awareness, education and training.
- Explain why people are vulnerable and how cyber attackers exploit these vulnerabilities.
- Identify measure and prioritize your human risks.
