

## ● 产品概述 INTRODUCTION

QJM 型液压马达与各种油泵、阀及液压件组成液压传动装置，由于它在设计上采取了一定措施，故可适应各种机器工况。该型马达具有重量轻、体积小、调速范围大，可有级变量、工作可靠、寿命长等优点，目前已应用于矿山工程、起重运输，冶金、船舶、机床、塑料加工、地质勘探等领域。主要用在履带行走、轨道轮子驱动、各种回转机构、勘探钻孔、绞车提升、皮带运输传动、物料搅拌、路面切割、船舶推进、塑料注射等部位。

QJM hydraulic motor that can constitute a hydraulic actuator with different oil pumps, valves and hydraulic parts is able to adapt itself to all kinds of mechanical conditions by reason of some measures taken to its design. The motor has many advantages, e.g. light weight, small size, wide speed regulating range, capable of stepping variation, reliable performance and long useful life, etc. It has been widely applied for mine engineering, hoisting transport, metallurgy, ships, machine tools, plastics processing and geological prospecting, etc. It is mainly used for pedrail walking, driving railway wheels, different slewing gears, drilling, winch hoisting, belt transmission, material agitation, cutting road surfaces, ship propulsion, plastics injection, etc.

## ● 性能特点 CHARACTERISTICS

1、该型马达的滚动体用一只钢球代替了一般内曲线液压马达所用的两只以上滚轮和横梁，因而结构简单、工作可靠、体积、重量显著减少。

2、运动副惯量小，钢球结实可靠，故该型马达可以在较高转速和冲击负载下连续工作。

3、磨擦副小，配油轴与转子内力平衡，活塞副具有静压平衡和良好润滑条件，并采用软性塑料球垫密封高压油，因而具有较高的机械和容积效率。

4、因配油轴与定子刚性联结，故该型马达进出油管允许用钢管连接。

5、该型马达具有二级和三级变排量，因而具有较大的调速范围。

6、结构简单，拆修方便。

7、该系列标准型液压马达的出轴一般只允许承受扭矩，不能承受径向和轴向外力、“QJM”-“Z”型液压马达的出轴可承受径向和轴向外力。

8、“QJM”-“T”型马达，中心具有通孔，转动轴可以穿过液压马达。

1. Because the rolling body of this motor is replaced by a steel ball rather than two or more rollers and beams commonly used in inner curve hydraulic motors, it is simple in structure, reliable in performance and greatly reduced in volume or weight.

2. A small kinematic pair inertia and a hard steel ball make this motor continuously work during the rotation at higher speed and under stronger impact load.

3. It has higher mechanical and volumetric efficiency for its small friction pair, oil feed shaft balanced with roller, piston pair capable of static pressure balance & good lubrication and coated high pressure sealing oil on soft plastic mat.

4. As the oil feed shaft and stator are in rigid connection, the oil pipeline of this model can be connected with steel pipe.

5. As this model has variable displacements dual and trinal speeds, it is wider in speed regulating range.

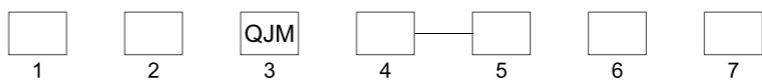

6. Simple structure and easy maintenance.

7. The output shaft of the standard model can only endure the torque rather than outside radial and axial forces, while that one of Z series hydraulic motor can endure outside radial and axial forces.

8. As T series hydraulic motor has a central through hole, the rotating shaft can pass through the motor.

## 型号意义

### ORDERING CODE

1 1- 表示定量，

1-fixed displacement

2- 表示二级变量

2-Variable displacement dual speeds

3- 表示三级变量

3-Variable displacement trinal speeds

2 变量控制方式：

F- 滑阀手动

F-manual control with spool Valve,

L- 螺杆手动

L-manual Control with screw

无符号为液控

no code:hydraulic control

3 径向球塞式液压马达

Radial sphere piston hydraulic motor

4 机座号 ( 同一机座号联接尺寸相同 )

Base number (all the coupling dimensions with the same base number are the same)

11- 其中 1 表示第 1 种基型，1 表示活塞为 1 排

11-1 Stands for the first base, 1 stands for a row of pistons

5 排量 ( 升 / 转 )

Displacement(L/r)

6 省略 - 标准形

no code-standard model

Z\*- 带支承， \* 表示种类

Z\*-motor with bearing, \*-mode

T\*- 通孔， \* 为孔径

T\*-motor with central through hole, \*-diameter

7 B- 带通油接板

B-Motor with oil passing flange

S- 带自控式制动器

S-motor with brake

Se- 带外控式制动器 ( 内花键 )

Se-out control brake (female spline)

SeZ- 带外控式制动器 ( 平键 )

SeZ-out control brake(key shaft)

SeZH- 带外控式制动器 ( 花键 )

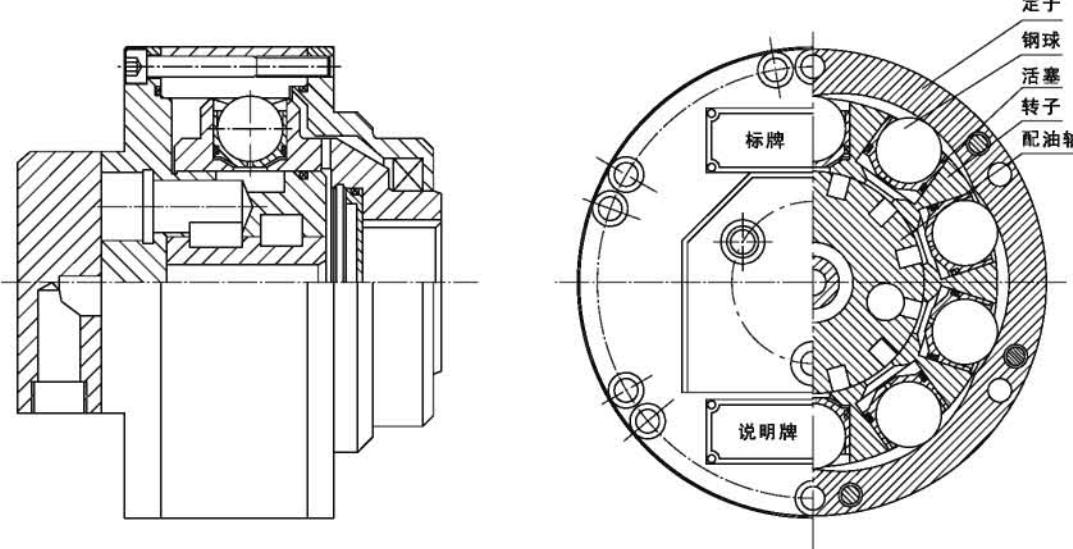

SeZH-out control brake(Spline shaft)

F- 带阀组

F-with Valve block

A- 花键尺寸不同于本系列

A-the spline size is different from this series.

由图可见, QJM型液压马达(标准型)的配油轴是与后盖刚性联结的,而转子体以配油轴作径向支承,以定子滚道和钢球作轴向支承(不另设轴承),它的输出轴是内花键(要求与工作机构输入轴松动配合),所以转子体是浮动的,而配油轴是刚性(它允许用钢管来联结)。压力油经配油轴中通道(或变速阀)分配到通高压腔的配油窗口,进入各活塞缸孔,活塞在压力作用下,通过钢球以N作用到定子上。

$$N = \frac{0.785d^2P}{\cos a}$$

式中d—活塞直径 p—工作油压力 a—压力角

同时定子以与N值相同的反作用力N'作用到钢球上,钢球以切向力F通过活塞作用于转子体。

$$F = 0.785d^2ptga$$

因此,转子体在F力的作用下绕配油轴旋转,由于同一瞬时有几只活塞都在压力油的作用下,所以产生很大扭矩。

当活塞随转子体旋转至定子曲线顶点后,活塞向轴心回程,活塞缸中工作油经配油轴窗口排回低压腔。如此往复即完成将液压能转换成机械能之任务。

通过改变两个通油口的油流方向,即可实现正反转。

液压马达的有级变量是由变速阀控制的(变速阀已装置在马达中),变速阀可以用手动或先导阀来控制,也可以把变速阀固定在某一个位置,使之变为定量马达(当要求改为定量马达或手动控制时,订货合同中应该注明)当用先导阀来控制时,控制油路的压力应在0.3—10Mpa范围内。

As shown in figure, the oil feed shaft and rear cover of QJM hydraulic motor (standard) are in rigid connection, the roller is supported in radial direction by the oil feed shaft, and in axial direction by the stator groove and steel ball (without bearings), and its output shaft is the inner spline (in loose coordination with the input shaft of its operation mechanism), so the roller is fluctuating while the oil feed shaft is rigid (allowed to be connected with the steel pipe). The hydraulic oil is fed to the oil feed opening to high-pressure cavity through the oil feed shaft channel (or the speed change valve), then the oil enters into every piston cylinder bore to make the piston actuate the ball steel to act on the stator in N for pressure.

$$N = \frac{0.785d^2P}{\cos a}$$

d—piston diameter p—pressure of working oil a—pressure angle

Meanwhile, the stator acts on the steel ball in a counterforce N' the same as N, then the steel ball actuates the piston to act on the roller in a tangential force F.

$$F = 0.785d^2ptga$$

Therefore, the roller rotates around the oil feed shaft in F, then a large torque is caused by the rotation of several pistons at the same time, influenced by the pressure oil.

When the piston rotates to the top of the stator displacement curve around the roller, the piston begins to return to the shaft center, and working oil in the piston cylinder is pushed back into the low pressure cavity through the oil feed shaft opening. Thus, the hydraulic energy is transformed into mechanical energy again and again for repeated operations.

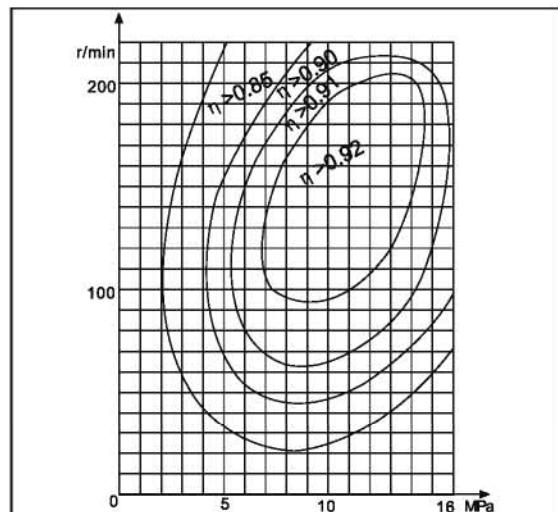

By changing the oil flow direction of two oil feed openings, positive and negative rotations can be realized.

The stepping variable displacement of the hydraulic motor is controlled by the speed change valve (installed in the motor) that can be controlled by hand or the pilot-actuated valve, and also fixed in a position, which makes the motor into a fixed displacement motor (the requirements changed to the fixed displacement motor or manual control should be indicated in the contract). When the motor is controlled by the pilot-actuated valve, the pressure for controlling the oil pipeline should be within the range from 0.3 to 10Mpa.

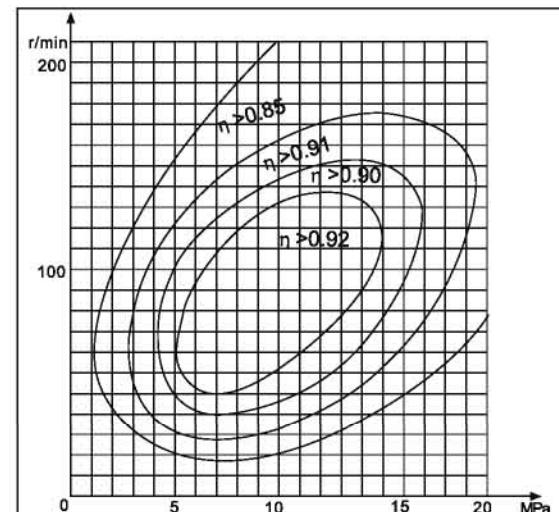

### QJM型各基型的额定流量(=额定转速x排量) Flow rate of QJM motors= rated speed x displacement

基型 Series	QJM001	QJM01	QJM11	QJM12	QJM21	QJM32	QJM42	QJM52	QJM62
额定流量 Flow rate L/min	50	63	80	80	100	160	250	320	400
外径 Outer diameter (mm)	Φ140	Φ180	Φ240	Φ240	Φ300	Φ320	Φ350	Φ420	Φ485

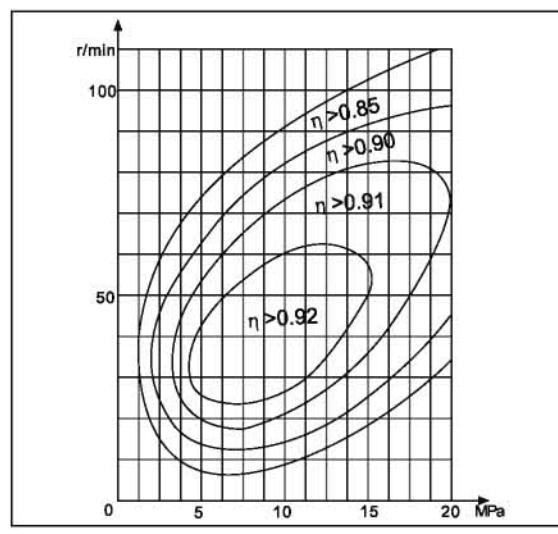

### 效率特性曲线 Performance Curve of Efficiency

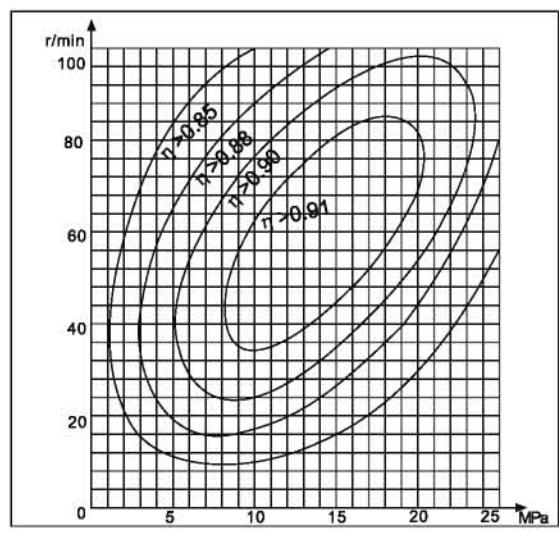

1QJM11-0.5型效率特性曲线

## 使用及注意事项

## 一、基本要求

马达的使用是否正确，将直接影响工作寿命，因此，必须满足以下基本要求。

1、QJM液压马达的工作介质必须用抗磨液压油，建议使用YB-N46或YB-N68液压油。

2、正常工作油温控制在-40℃~80℃。短期工作最高油温不超过90℃。

3、工作介质必须清洁，滤油精度可按所配油泵要求选定。

## 二、安装

安装液压马达必须注意：

1、液压马达花键孔与工作机构的花键轴必须对中，并保证二者松动配合。对花键处和安装定位机座的技术要求见下图所示，液压马达在机器中安装并联接好管路后，应用手或扳手盘动液压马达、此时转子应灵活，不得有卡住或重轻现象。

2、因QJM液压马达转子呈浮动状态，故安装时花键联接必须留轴向空隙2~3毫米，以保证转子体可以在轴向自由窜动（见图所示）。

3、所有安装螺钉必须拧得很紧。

4、安装过程中各通油孔必须堵塞，以防脏物进入液压马达。

## 三、使用和维护

1、新装液压马达的系统，工作油在运转2~3月后应调换一次，以后每隔1~2年换一次油，具体视使用条件和工作环境而定。

2、马达在二速或三速档或在工作中存在作泵工况时，主回路应有0.3~0.8Mpa的背压。转速高时取大值，具体视工况而定，以不出现冲击声为准。

3、液压系统中不得吸入空气，否则会使马达运转不稳定，出现冲击声。

4、泄漏油管路及接头的孔径一般在Φ12以下，并直接与油箱接通，若要过滤单独用过滤器，壳体内压力一般不允许大于0.1Mpa。

## USAGE AND NOTICE

## I. Principal requirements

How to use the motor has direct influences on its useful life, therefore the following principal requirements must be satisfied.

1.QJM hydraulic motor must be lubricated with anti-wear hydraulic oil, recommended for YB-N46 or YB-N68 hydraulic oil.

2.The normal temperature range of working oil is from -40℃ to 80℃. The maximum temperature for its short-term usage mustn't exceed 90℃.

3.The working media must be clean. The oil-filtrating precision is decided by the provided oil pump.

## II. Mounting

The motor must be mounted according to the following steps:

1.The splined hole of motor and the splined shaft of operating mechanism should be aligned and kept in loose coordination. For technical requirements on the spline and locating seat, see the following drawing. After mounting the hydraulic motor in the machine and connecting the pipeline, turn the motor by hand or a spanner. The rotor should be flexible and free from block or unbalance.

2.As the rotor of QJM motor is in floating status, 2~3 mm distance should be left before connecting the spline to ensure the unrestricted movement of rotor in the shaft direction (as shown in drawing).

3.All the mounting screws must be tightened.

4.During the installation, all the oil feed openings must be blocked for avoiding the entrance of dirts into the motor.

## III. Usage and maintenance

1. For the system newly equipped with hydraulic motors, its working oil must be renewed once after running for 2 to 3 months, and afterwards once every 1 to 2 years. For details, see its operating conditions and working environment.

2. If pump operating conditions exist when the motor is running in dual or triad speeds or working, the back pressure from 0.3 to 0.8Mpa must act on the major loop. Apply the maximum pressure during the rotation at high speed. Please select the pressure according to actual conditions, but it shouldn't cause any impact sound.

3. No air exists in the hydraulic system, otherwise the motor can't run smoothly or will make some impact sound.

4.The bore diameter of the leakage oil pipe and the joint should be generally less than Φ12. The pipe can be directly connected to the oil tank. If filtered, please use separate strained oil filter. The pressure of inner shell should not exceed 0.2Mpa.
