

Missourians Deserve SAFE Medicine

On November 6 Vote NO
on Medical Marijuana

Safe "medical" marijuana must have protection against use in pregnancy
Safe "medical" marijuana would have a minimum age of 25
Safe "medical" marijuana would not be smoked
Safe "medical" marijuana would only be allowed for specific medical ailments with proven efficacy and safety

IT'S *not* MEDICINE

Missourians Deserve SAFE Medicine

On November 6 Vote NO
on Medical Marijuana

Safe "medical" marijuana must have protection against use in pregnancy
Safe "medical" marijuana would have a minimum age of 25
Safe "medical" marijuana would not be smoked
Safe "medical" marijuana would only be allowed for specific medical ailments with proven efficacy and safety

IT'S *not* MEDICINE

- Frequent THC use by adolescent brains, up to 25 years of age, significantly increases risk of suicide, mental health disorders, academic, and vocational struggles.
- There are dramatic health risks associated with smoking/vaping anything. The only benefit to smoking a THC product is a rapid high.
- CBD Oil is widely available in most states. Much of the medical benefits including seizure treatment are found in these extracts without the side effects of THC.
- The higher concentrations of THC in recent years is primarily driven by the desire for impairment not for medical benefits. The lowest THC concentrations possible should be paramount to any medical use.
- Medicine is not taxed in Missouri. Two major driving forces for legal Cannabis are tax revenue and the economic growth. Cannabis, just as with alcohol and cigarettes, (the tax collects only 1/9th of the impact costs) and can never be taxed enough to cover the financial damage caused by abuse and impairment associated with marijuana.
