INTERPRETATION OF THE RESULT	EXPRESSION	TRANSMISSION
Normal homozygous : the animal carries 2 normal copies of the gene. Heterozygous : the animal carries a normal copy and a defective copy of the gene. Mutated homozygous : the animal carries 2 defective copies of the gene.	✓ The animal will not develop the form of the disease associated to the tested mutation. ! The animal will develop the disease without being able to predict the age of onset or severity of symptoms.	The animal does not transmit the tested mutation. The animal will transmit the tested mutation to all or part of its offspring. Reproduction is to be avoided or adapted according to the disease and the associated frequency.
