

TRUPCR® Leptospira Detection Kit  

The TRUPCR® Leptospira Detection Kit is a qualitative Real-time PCR kit that detects *Leptospira spp.* in whole blood, serum or urine. Leptospirosis is a widely distributed zoonosis which is most common in tropical and subtropical regions and has the greatest impact on public health in developing countries.

The TRUPCR® Leptospira Detection Kit is based on the amplification of a conserved region by primer and probes specific for *Leptospira spp.* The detection is achieved using fluorescent probes labeled with HEX and TEX Red. In this kit there are two independent reactions running in parallel in a single tube:

- 1) Detection of *Leptospira spp.* (HEX channel)
- 2) Internal control (Tex Red channel) which allows excluding unreliable results.

Key features:

- Highly sensitive and specific
- Extensively validated on clinical samples
- Internal control included to avoid false-negative results
- Rapid, reliable, comprehensive and cost-effective
- Easy work flow & compatible with various Real-time PCR instruments
