

# AOD-9604

## BODY FAT REDUCTION

The human growth hormone (hGH) has properties making it a potential candidate to treat obesity. AOD9604 is a peptide fragment of the C-terminus of hGH (Tyr-hGH177-191), which harbors the fat reducing activity of hGH, without its negative effects.

### How does it work?

AOD-9604 has been shown to stimulate the breakdown of fat (lipolysis) and inhibit the formation of new fat (lipogenesis), particularly in areas with high fat concentration like the stomach and thighs. AOD-9604 works without disrupting your blood sugar levels.

#### Health Benefits:

- Body fat reduction
- Increasing calorie burn
- Triggering fat release
- Cartilage and bone repair
