

GHK-Cu PEPTIDE THERAPY

COPPER PEPTIDES

Peptides made of copper are protein fragments found in nature, with a high affinity for copper ions, and are believed to be crucial for the body's regular functioning. GHK-Cu has been extensively studied and shown to have various functions and advantages within the human body.

IMPROVEMENTS IN THE BODY

Wound healing through increased collagen and decorin production.

Skin remodeling and regeneration antioxidant and anti-inflammatory effects. Vascular regrowth and improved blood flow to injured tissues.

Hair growth and thickening caused by stimulation of collagen synthesis by fibroblasts.

Lung and breathing improvements through suppression of inflammation and oxidative damage.
