16 m² Modular Home Veranda. No Concrete Footings. Removable & Reusable.

First-generation GRIDBASE panels, Baldivis WA. Right: the site before installation.

16 m²
Connected platform area

4
2 m × 2 m panels

~3 hrs
Approximate job time

The Problem

A new modular home left a step of about 300 mm from the entrance to the ground. The only way into the backyard was a narrow passage beside the main house.

The Solution

4 first-generation panels were moved along the side of the property with a lifting harness, then connected and levelled. Electrical cables were routed beneath the platform.

The Result

A 16 m² veranda for access and outdoor entertaining, finished in about 3 hours.

> *"Very impressed with your product."*
