

FOR IMMEDIATE RELEASE

AquaWisdom Introduces 'SHE': How An Offline AI 'Fortune Cookie' A Day Turns Homes into Private Hist-Lit Encyclopedia Libraries

[Hong Kong] – [20.10.2026] – **AquaWisdom** today announced the launch of its **AI-driven Self-created Hist-Lit Encyclopedia (SHE)**, a private, offline AI ecosystem designed specifically for homes and classrooms. Transforming daily learning into an interactive “fortune cookie” experience, **AquaWisdom** allows children to safely “crack open” the stories of over 500 famous historical and literary figures without the dangers of the open internet or recurring cloud API fees.

As tech giants push expensive, high-end local AI hardware and obviously general homes and families are not the target customers, **AquaWisdom** introduces a powerful solution to fill this void : families don't need a \$2,000+ GPU like an NVIDIA RTX Spark or Mac Studio to access private AI. The **AquaWisdom SHE** ecosystem

runs flawlessly on affordable, everyday Mini PCs by utilizing strict Docker CPU limits and optimized open-source LLMs.

Key Benefits of the AquaWisdom Ecosystem:

- **Engaging & Personalized Learning:** Makes learning fun. As kids ask questions and follow the interactive menus, they are actively building their own self-created digital Hist-Lit encyclopedia.
- **100% Private & Offline:** Runs entirely on a local Mini PC. No data ever leaves the home, no recurring cloud API fees, and immune to internet outages.
- **No Prompt Engineering Needed:** The **CRISP UI** provides a structured, interactive menu. Kids, parents, and teachers don't need to learn complex prompting to get high-quality results.
- **Multi-User & Parental Guidance:** Acts as a central hub allowing multiple tablets to connect simultaneously, enabling parents or teachers to guide children's learning journeys from another device.
- **Child Well-being First:** Hardwired ethical restrictions block obscenity, emotional addiction, and negative messaging, creating a safe digital sandbox.
- **Affordable Solution for Homes:** Runs on standard, affordable hardware instead of expensive \$2,000+ AI rigs. A complete (Entry-Level) Plug-and-Play Home Package is available for \$998.

Rejuvenating the Encyclopedia and the Humanities

"Everybody knows what an encyclopedia is—many of us even have dusty sets sitting on our bookshelves. But when was the last time you actually took one down and read it?" asked Mr Sidney Lok, Senior Consultant of **AquaWisdom**. "People might say this information is already free on Wikipedia, but Wikipedia doesn't provide a carefully curated chronology. We hired experts in Chinese and Western history and literature to select over 500 vital figures and arrange them in chronological order. With AI, the encyclopedia is no longer a static, heavy book; it becomes personalized and self-created by the users based on their questions and how they navigate our menus. To most people, and especially kids, history and literature can seem boring, difficult to understand, or even outdated and irrelevant. AI allows us to rejuvenate these subjects, making them highly accessible and approachable so they actually come alive."

"We certainly don't believe history and literature are no longer needed today; if anything, they are more vital than ever," he continued. "But the reality is that humanities subjects are exactly what many schools are lacking right now. They are not just for building fundamental knowledge; they allow us to learn from history and appreciate the beauty of literature, which is filled with the wisdom of our ancestors. This is how we help children develop a strong moral compass and value system—

qualities that have been heavily polluted by social media for years, which is exactly why we are now seeing so many countries push for bans. By making this learning a daily 'fortune cookie' adventure, we aren't just teaching history; we believe we can help make the world a much better and more peaceful place. But realizing a vision of that scale requires a global effort. That is why we open-sourced our platform under the **Business Source License**—to invite educators and developers worldwide to participate, adapt this for their own cultures, and help us build that future together. Use License for NGO/Church's own usage will be free.

The SHE Experience & Child Well-being

Unlike standard AI chatbots that present a blank text box, **AquaWisdom** utilizes a proprietary **CRISP (Controllable, Repeatable, Intuitive, Secure, Predictable)** UI philosophy. Because the Master Node acts as a central hub, its multi-user capability allows for true parental and teacher guidance. Multiple tablets can connect simultaneously, meaning siblings can explore different subjects while a parent guides the journey from another room.

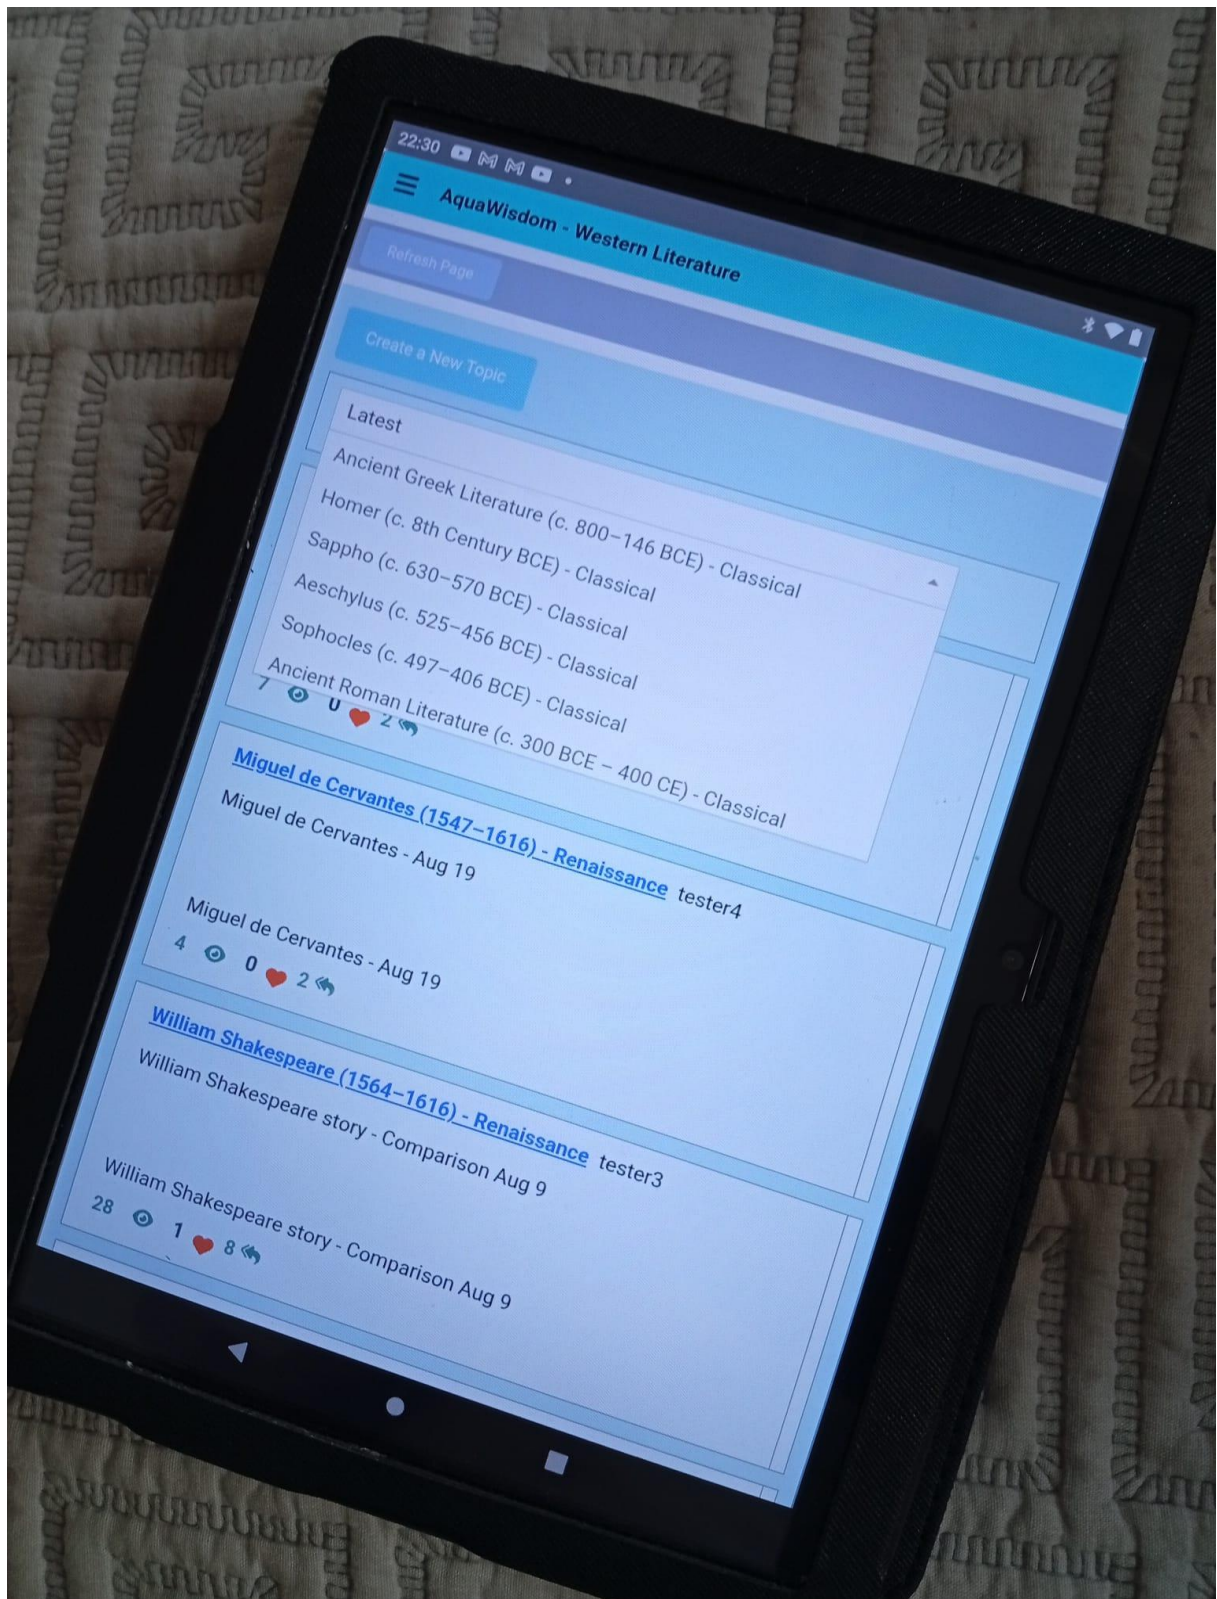

Furthermore, safeguarding children is a core, non-negotiable principle of the platform. The system is hardwired with strict ethical AI restrictions that actively block obscenity, emotional addiction, and negative messaging. By operating entirely offline and eliminating toxic algorithmic feeds, **AquaWisdom** creates a safe, ad-free digital sandbox where children can freely explore without exposure to the dark side of the modern internet. Because the AI "brain" lives locally on a dedicated Mini PC, no data ever leaves the network, providing true offline portability—children can crack open their daily "fortune cookie" anywhere, from the school bus to an airplane.

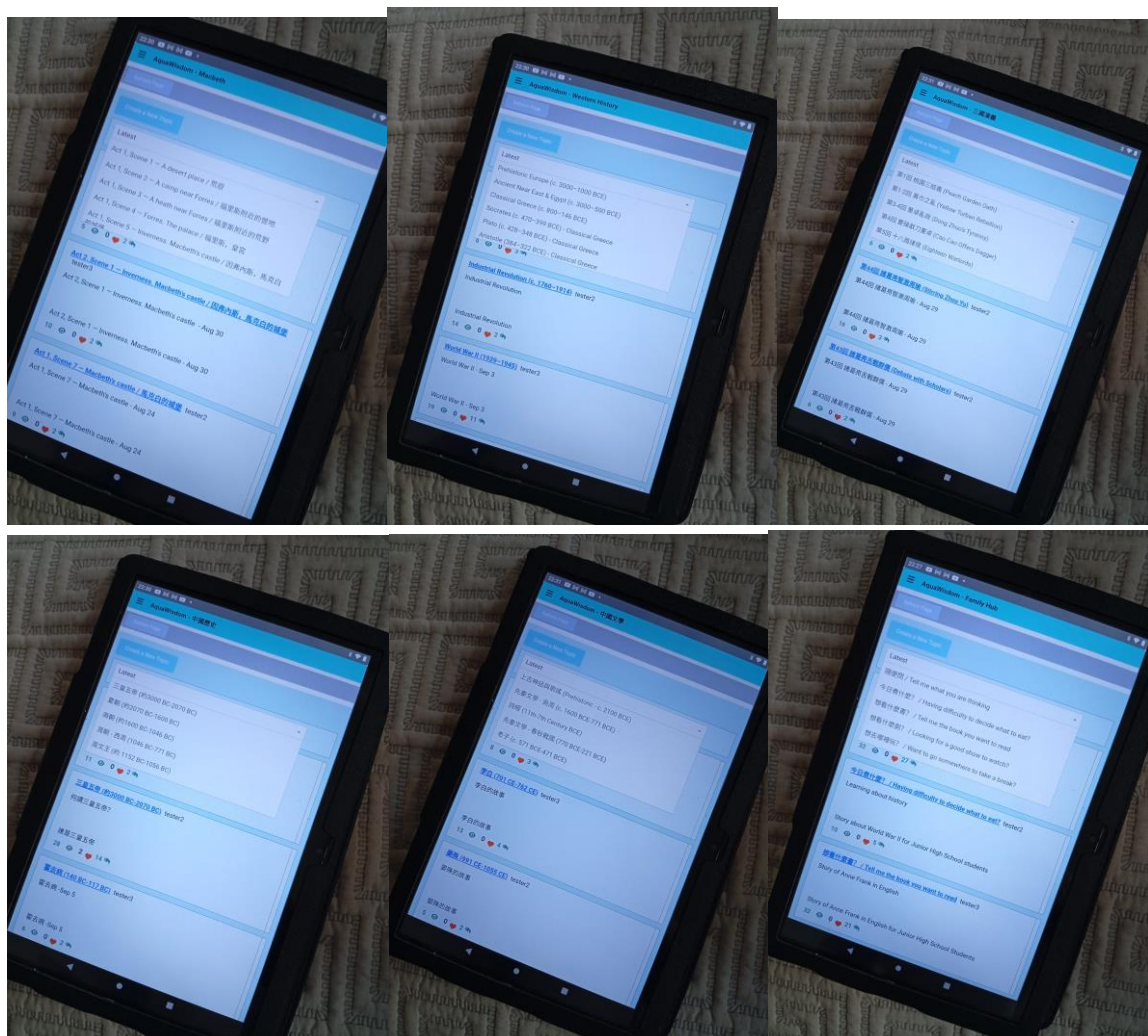

A Jar Full of Different Fortunes: The 7 Volumes of SHE

AquaWisdom's SHE comes with 7 specialized "Volumes," each equipped with a dedicated AI teacher to guide the child:

- B5 - 中國歷史: From ancient Chinese dynasties to modern history.
- B6 - 中國文學: Classical Chinese poetry, novels, and literary analysis.
- B7 - 三國演義: A 120-chapter interactive journey through the classic Chinese novel, *Three Kingdoms*.
- B8 - Western History: Ancient Greece to modern civilizations.
- B9 - Western Literature: Shakespeare, Victorian eras, and modernism.
- B10 - Macbeth: Deep-dive scene, character, and theme analysis.
- C1 - Family Hub: A family-safe assistant for daily life, cooking, and DIY.

Empowering Global Developers Through Open-Core Localization

While the complete \$998 Entry-Level Plug-and-Play Home Package (which includes a pre-configured Mini PC, an 8" Android tablet, and 5 user licenses) is designed for non-technical families, **AquaWisdom's** true global impact lies in its open-core strategy.

The source code is publicly available on GitHub under the **Business Source License (BSL 1.1)**. This *empowers independent developers worldwide to quickly localize the Self-created Hist-Lit Encyclopedia (SHE) for their own countries*. Whether in the US, UK, Nigeria, India, Mexico, Egypt, Indonesia, Brazil, or Australia, developers can customize the platform to educate children in their native language about their unique national history and literature.

By deploying entirely offline, local developers and IT vendors *bypass two massive modern hurdles: the looming threat of strict, evolving AI regulations targeting children, and the burden of expensive, recurring cloud API fees*. Proprietary deployment automation and comprehensive Developer Setup Guides are available via the

Enterprise Developer Tier (\$960/year in 12 monthly payments) to help vendors scale these localized deployments.

About **AquaWisdom**

AquaWisdom is an educational technology platform focused on bringing private, offline, and secure AI to homes and classrooms. By leveraging local LLMs, robust node.js/docker backend and multi-users support React/Capacitor frontend, **AquaWisdom** delivers a zero-latency "Agent E-reader" experience without recurring cloud API fees, creating a safe digital library for the next generation.
