

BROKEN NDP PROMISES

- **September 2020:** The NDP government promises to implement the recommendations of the Old Growth Strategic Review, prioritizing healthy ecosystems over fibre extraction.
- **November 2021:** The government-appointed Technical Review Panel recommends logging deferrals in 2.6 million hectares of the most at-risk old growth forests.
- **November 2023:** The NDP government releases a draft of the Biodiversity and Ecosystem Health Framework, promising to prioritize biodiversity in the forests.

Instead, Old Growth forests continue to be logged in BC at the rate of 160 soccerfields per day.

WANTED: THE CULPRITS

BC Ministry of Forests—Serial Clearcutter, Repeat Offender

Evidence: Failure to implement the government's own 2020 Old Growth Strategic Review and no progress on the 2023 Biodiversity and Ecosystem Health Framework. BC Timber Sales (BCTS), a Ministry of Forests agency managing 1/5 of the Timber Harvest land base, continues to issue logging permits for irreplaceable old-growth, including the most at-risk areas recommended for deferral by the Technical Review Panel. In fact, a recent investigation found that **logging is 4 times more likely inside at-risk old growth forests that were recommended for deferral** than in other old growth.

BC Ministry of Forests for Killing Old Growth and Destroying Watersheds

Evidence: Multiple studies confirm that logging increases large peak flows in watersheds, worsening flood and drought risk. There has been no measurable progress on watershed protection despite years of consultation, studies and talk.

BC Timber Sales (BCTS) and the Forest Industry for Promoting Clearcuts as “Wildfire Protection”

Evidence: The BCTS Timber Sales Task Force, supported by the forest industry, recently recommended increasing logging by over 50% and logging within provincial parks, under the scientifically questionable guise of wildfire mitigation.

Premier Eby for Pouring More Taxpayer Money into a Broken Corporate System

Evidence: Hundreds of millions of dollars in taxpayer-funded subsidies already go to the forestry industry every year. These subsidies mostly benefit large corporations investing their profits elsewhere, while workers get unemployment insurance, maybe.

Minister of Forests Ravi Parmar for Allowing Increased Logging in Deferred Areas and Threatening Logging Provincial Parks

Evidence: Publicly, Minister Parmar echoes BCTS Task Force language advocating 'active management' inside protected areas, using wildfire mitigation as the rationale. The Forest Practices Board reports emphasize that true wildfire mitigation must focus on the interface near communities, NOT parks or old growth reserves.

NDP Government for Failure to Give Fair Conservation Funding to First Nations

Evidence: Grand Chief Stewart Phillip, President of the Union of BC Indian Chiefs, has repeatedly criticized the Government's delay of funding to enable First Nations to end old-growth logging and prioritize human and ecological well-being.

TAKE ACTION!

If you care about protecting the last remnants of Old Growth forest in BC, contact **David Eby**
(250-387-1715, premier@gov.bc.ca),
Minister of Forests **Ravi Parmar**,
(250-387-6240,
FOR.Minister@gov.bc.ca)
and your own MLA.
