

# U.S. Amines

## An AdvanSix company.

### It all starts with...Bucks

The Bucks Site joined the AdvanSix portfolio following the company's acquisition of U.S. Amines. The site develops the world's highest-quality synthetic Alkyl amines, which are used in a variety of end-use applications like agrochemicals, but also in rubber processing, water treatment chemicals, pharmaceuticals and others. The AdvanSix Bucks team is active in the local community and supports the LeMoyne Community Advisory Panel, the LeMoyne Industrial Park Board of Directors, as well as the United Way. We pride ourselves on delivering the best for our customers each and every day.

In January 2023, Chris Vaughn joined AdvanSix as Plant Manager of the Bucks Site. "I'm proud to lead this site and drive safe, stable and sustainable operations to support our customers."

### Advancing Safety Excellence: It all starts with...a zero-incident mindset

AdvanSix Bucks received the prestigious AdvanSix Safety Excellence Award in 2022, in recognition of one full year without a recordable injury among employees and contractors. The award demonstrates the site's dedication to safe, stable and sustainable operations and truly Living Safety every day. The team regularly performs risk assessments on non-routine activities to evaluate potential hazards and introduce safeguards as needed for work to be completed safely. By prioritizing safety as a core value, our Bucks facility demonstrates the positive impact that an ownership mindset can have on achieving a zero-incident culture.
